

## COVID19: Louis Pasteur's Junk Science Germ Theory

By John O'Sullivan, principia-scientific.com, 23 August 2021

Ethel Douglas Hume

Dr Andrew Kaufman

From Ethel Douglas Hume to Dr Andrew Kaufman. My nascent interest in the otherwise obscure debate of *germ versus terrain theory* blossomed during the first 'lockdown' imposed in 2020. Delving deep into the history of this field of science will waken you from the shocking lies we have all been fed.

The modern prevalence for shutting down all debate on such matters is a hideous re-emergence of fascism. If there are controversies and competing theories of science, then why not openly debate them?

With over a decade of success as a science writer on the man-made global warming scam and unexpectedly having more time to spend on solitary research due to 'lockdowns,' my interests turned to the latest Big Fraud befalling us all.

From months of reading I learned that *everything* taught at school about germs and the 'genius' Louis Pasteur was, at best, embellishment and at worst, a downright lie.

One book that caught my interest was *['Béchamp or Pasteur? A Lost Chapter in the History of Biology'](#)* by Ethel Douglas Hume (photo, top). For readers seeking a truly authentic source for a historical perspective on the crumbling germ theory I recommend it.

[1]

Derided by the mainstream for decades, Hume was a British anti-vivisectionist, animal welfare writer and traveller. She is best known for authoring this controversial book in 1923 revealing how Louis Pasteur was a fraud and plagiarized Antoine Béchamp's theories.

Giving no credit to Bechamp, Pasteur developed the theory of monomorphism based on Bechamp's work but Pasteur, himself, did not understand the science until much later.

Bechamp (left) and Pasteur

I first grappled with this astonishing revelation when writing about Béchamp last year (April 6, 2020) in [‘COVID19 Pandemic ‘Hoax’ Re-Opens Great Germ Theory Debate.’](#)

When (and if) sanity returns to humanity, forgotten (or suppressed) books like Hume's will be invaluable original source material shared by future generations as a warning of what happens when powerful, self-serving interests pervert science to their own ends.

Mistrustful of the mainstream media narrative and averse to the insane masking up, social distancing and being a dumb guinea pig in a mass vaccine experiment I delved online to uncover what dissenting, highly-qualified opponents of consensus science had to say.

To my horror I saw that the vaccine fraud was just as much an all-encompassing, planned attack by eugenicists on the average, scientifically illiterate citizen as the human-caused climate apocalypse nonsense. Quite simply, the rich, billionaire class want us gone from 'their' planet.

My zeal to get the bottom of this was heightened by the [‘Anatomy Of COVID-19 By Dr. Andrew Kaufman’](#) one of many fascinating medical analysts showing that Big Pharma led us astray since the time of billionaire, John D Rockefeller's assault on science in the late 19<sup>th</sup> century. The motive was money and power and a psychopathic urge to meddle in the lives of the sane.

Read: [How Rockefeller Snuffed Out Natural Cures & Created Big Pharma](#)

Even today, the misanthropic Rockefeller Foundation is spending \$13.5 million in new funding to “strengthen Covid-19 response efforts.”

Thanks to brave medical doctors like Kaufman my eyes slowly opened. I urge people of conscience to look up Dr Kaufman's work. [2]

I saw how a plethora of vested interests from Malthusians, corrupt politicians, misguided do gooders and profit-driven pharmaceutical companies were bastardizing the traditional scientific method to turn [allopathic medicine](#) into a dystopian money-spinner.

An emerging cohort of independent (non-profit-driven) doctors now believe we must move away from solely allopathic medicine and move towards [Integrative Medicine](#).

The way the media and vested interests (Big Pharma, politicians, etc) have steadfastly kept to their unbending, unquestioning narrative of “*vaccinate, vaccinate, vaccinate,*” is a travesty because it has little, if any, merit in science because *there is no COVID19 gold standard isolate*.

On this axiomatic point please check out the claims of expert laboratory testing scientist, [Dr Saeed Qureshi](#) who has 25+ years in this field.

After 18 months of this “pandemic” even braindead vax promoters are forced to admit that their “deadly virus” mutates to untold variants. Their solution? Yearly booster shots *ad infinitum* of more toxic and unproven potions (creating customers, not cures, is the Big Pharma maxim).

But the vaccine industry is a cult. It cannot be shaken by reason or empirical scientific fact to abandon their zeal to jab the world (and profit handsomely from it). The pharmaceutical company Pfizer expects to earn up to US\$26 billion (£18 billion) this year from the sale of its COVID-19 **vaccine**.

**Profits** for the first quarter of 2021 are apparently 44 percent higher!  
(source: [theconversation.com](#))

From the very beginning of the 1942 Preface to Ethel Douglas Hume’s book we are told that to even attempt to decry, germ theory, the very bedrock of modern medicine was a very mighty challenge:

*“...the erroneous belief that germs cause disease and must be controlled or eliminated before it can be cured is so widespread as to close the minds of many people to any other ideas on this subject.”*

Indeed, like the man-made global warming fraud, it may take a generation or more to fully overturn this monolithic error of science. Too much is at stake for the heavily invested to go quietly.

Ethel Douglas Hume wrote her benchmark work in 1923 and only now, in 2021 after the COVID19 pandemic fraud unravels do we finally have enough critical mass among free-thinking intellectuals to take up the challenge of righting this wrong.

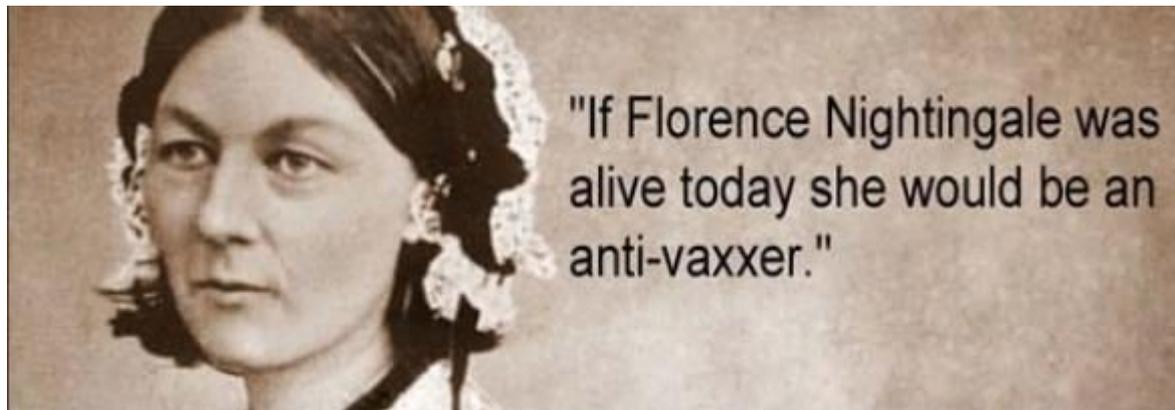

*“If you explore the history of the medical profession and the various ideas regarding the cause of disease that were held by leading physicians before Pasteur first promulgated his notorious ‘germ theory’, you will find convincing evidence that Pasteur discovered nothing,*

*and that he deliberately appropriated, falsified and perverted another man's work.” (Page 11, 'Béchamp or Pasteur? A Lost Chapter in the History of Biology' by Ethel Douglas).*

In fact, the idea of germs causing disease goes back to the 16<sup>th</sup> century when Geronimo Fracastorio of Verona, published a work (*De Contagionibus et Contagiosis Morbis, et eorum Curatione*) in Venice in 1546 which contained the first statement of the true nature of contagion, infection, or disease organisms, and of the modes of transmission of infectious disease.

Better yet in 1762 M. A. Plenciz, a Viennese physician, published the first germ theory of infectious diseases which maintained that there was a special organism by which each infectious disease was produced, that micro-organisms were capable of reproduction outside of the body, and that they might be conveyed from place to place by the air.

So, nothing in the germ theory that the 'genius' Pasteur gave us was unique. Worse still, Pasteur then outright plagiarized the work of his French contemporary, Antoine Béchamp, the originator of the competing Terrain Theory of disease.

No less a historical figure than Florence Nightingale, the visionary of modern nursing practice, published her own attack on the idea of germ theory in 1860, over 17 years before Pasteur was hailed for his 'breakthrough.' (*id.* Page 12)

Be in no doubt that if she lived today Florence Nightingale would be a champion of the anti-vax movement and a champion of Béchamp's terrain theory. As pointedly stated:

*“True nursing ignores infection, except to prevent it. Cleanliness and fresh air from open windows, with unremitting attention to the patient, are the only defence a true nurse either asks or needs. – Wise and humane management of the patient is the best safeguard against infection. The greater part of nursing consists of preserving cleanliness. – The specific disease doctrine is the grand refuge of weak, uncultured, unstable minds, such as now rule in the medical profession. There are no specific diseases; there are specific disease conditions.”*

In essence, Nightingale's words are prescient today because the aftermath of the Great COVID 19 Pandemic Fraud is that the world is finally waking up that Vitamin D (via sunlight), good sanitation, a healthy diet and avoiding stress are the better part of good health such that prevention is better than cure.

Big Pharma, just like the crooked politicians and media peddling the narrative, never advises us to live healthy. Instead, they push their expensive potions as treatments belying the fact that a strong immune system need not be vaccinated or tampered with.

Adherents of Terrain Theory will insist that *viruses and germs are the product of dis-ease (disease)* wherein a disrupted and poorly functioning immune system becomes overwhelmed by the toxicities the body ordinarily successfully excretes and must engage in the ‘emergency clean out’ – otherwise misidentified as “an infection” such as influenza, cholera, measles, TB, etc.

Promoters of Germ Theory would rather you believe the opposite; that bacteria *causes* disease.

Pasteur had distorted Bechamp’s discoveries and took the glory in the history of medical thought. Bechamp wrote the key points of his theory in his book “Blood and its Third Element” (The Blood and its Third Element). Faced with monomorphism, Bechamp argued that microorganisms could develop through various forms within their life cycle. All microorganisms participate in this property.

As [karmenlidia.blogspot.com](http://karmenlidia.blogspot.com) showed:

*“Bechamp also discovered that microbes that he called **microzymes** normally inhabited the blood and play an important role in **physiology**. These organisms are generically called **endobionts**. These organisms changed shape to adapt to changes in the terrain and could become pathogens.*

*For Bechamp, this was the cause of illness, that is, illness always comes from within. Bechamp proved that Pasteur was wrong since during an infection these organisms were not “caught” from outside, they came from within. This is the theory of pleomorphism. Claude Bernard entered this discussion arguing that the most important thing in the disease process was the patient’s domain.”*

But as no government laboratory since the outbreak of COVID19 has even isolated and proven a Gold Standard for their virus it is becoming clear that the virus concept has been misplaced.

Virus do not cause disease. They are the outcome.

*“They have the same function as those found in the soil, or in sewage, or elsewhere in nature; they are there to rebuild dead or diseased tissues, or rework body wastes, and it is well known that they will not or cannot attack healthy tissues. They are as important and necessary to human life as those found elsewhere in nature, and are in reality just as harmless if we live correctly, as Béchamp clearly showed.” (page 30, id.)*

Terrain Theory advocates argue that it is often vaccinations themselves which cause the worsening of symptoms and initiate some diseases.

A book entitled *Horrors of Vaccination* drew attention to the fact that official publications of the United States Government ascribed several epidemics of foot and mouth disease directly to the use of vaccines or serums; especially those of 1902, 1908, and 1915.

### **Get Vaccinated and Be Sicker!**

As the fallout from the mass COVID19 vaccination programs reveal that the jab doesn't protect you from getting sick and, in fact, can cause deadly, life-changing adverse events, it is worth noting that is merely repeating what has been known in science about vaccines for over a century.

As I write (August 2021) Israel is proving this very point. That small nation is one of the world's most highly jabbed countries for protection against influenza and COVID19. But to no effect!

Haaretz reports that over [78percent of Israelis are jabbed](#) but COVID outbreaks in the country are surging, mostly among jabbed Israelis. The number of serious cases is at six-month high. Efforts to contain outbreaks by booster jabs made a bad situation even worse.

*All this was known among honest scientists a century or more ago. As Ethel Douglas Hume's chapter on the issue tells us. Titled, 'Smallpox And Vaccination In Leicester' (page 75, id.) Hume writes that:*

*"...during all the years that vaccination was actively pushed, through compulsory laws, etc., smallpox returned again and again, and usually after an increase in vaccination, culminating in the great epidemic of 1872. This came after a most intensive four-year effort to completely vaccinate the population under a law (of 1867) that made refusal to submit to it a penal offense. And it came just after the supreme Medical Officer of England had announced that 97.5% of the population had either had smallpox or been vaccinated. The worst epidemic came just when they had obtained the utmost in 'protection'! Also note that since this time, while vaccination has dropped off in Leicester, smallpox deaths have also dropped off, and in this case to none! While the public has so lost confidence in vaccination that less than 6% of all newborn children in Leicester for the past 20 years were vaccinated, there has not been one single death from smallpox in the last 33 years of the records, from 1905 to 1938 inclusive. There is probably no city or country having compulsory vaccination in the world that can show a record like this."*

That is until 2021!

On Page 81 of her book Hume further reports:

*" [vaccines] biologicals not only did not prevent smallpox, but on the contrary actually seemed to increase it, and furthermore, also increased tuberculosis in a substantial manner."*

Hume adds further:

*“Many years ago the famous English physician Alexander Haig proved in Uric Acid in the Causation of Disease that the breakdown of human cell tissues was due primarily to uric acid formed in the breakdown of protein, and that all animal flesh contained some uric acid when eaten, hence was much more potent in starting this break-down than plant foods, which were all free of uric acid when fresh. He contended that germs were merely of secondary importance, and never the cause of the various conditions of ill-health with which they were frequently found.” (id page 92)*

Wikipedia tells us Hume was an [anti-vaccinationist](#) and [germ theory denialist](#). publishes a trash piece on Hume, so right there that may be an indication she was ‘over the target.’ In 1933, Hume commented that cholera, dysentery and enteric are evidence of bad sanitation and bad water supply and do not prove the [germ theory of disease](#).

As the COVID19 pandemic fraud continues to unravel savvy readers will make up their own minds. But as Hume’s book concluded:

*“The evidence offered here should satisfy anyone that the use of animal pus to heal the sick is one of the greatest debacles in the history of mankind.”*

In her even-handed way Hume asks readers to do their own research. To assist you in this, she asks you pose yourself the following questions to discern whether **Béchamp or Pasteur** was likely right:

- Who of them was really the Intellectual, the Scientist and Researcher who was very well received and loved in scientific circles. His studies covered Biology, Microbiology, Biochemistry and Pathology? **Béchamp or Pasteur?**
- Whose work was extensively documented at the Paris Academy of Sciences? **Béchamp or Pasteur?**
- Who of them was President of the Ministry of Public Health of the Powerful French Empire, a personal friend of the royal family, fully trusted with finance from the Royal Crown to apply it in whatever way? **Béchamp or Pasteur?**
- Who was not a Scientist, nor did he conduct field research, his work was done from his office? **Béchamp or Pasteur?**
- Who of them was named by his own colleagues as an impostor, a plagiarist and ignorant and arrogant? **Béchamp or Pasteur?**
- who obtained an undeserved place in the history of Medical thought, and who never dared to denounce him, for his great political and economic power and his enormous influence? **Béchamp or Pasteur?**
- Who of them demonstrated and registered their Discoveries before the other, at the Royal Academy of Sciences in Paris, France? **Bechamp or Pasteur?**

**Watch Dr Andrew Kaufman below in a live video** presentation detailing the current key issues:

The true genius, Bechamp tells us that microbes change and develop as a result of changes in the terrain in which they live. The disease as a biological process develops depending on this internal environment. The determining aspect in the field is the pH.

In spite of everything, Pasteur due to his influences and his wealth managed to disseminate these ideas and ridicule Bechamp's opinion. Years later, on his deathbed, Pasteur recognized Bechamp's work and said, "*Bernard was right, the germ is nothing, the terrain is everything.*"

But this recognition was of no consequence because allopathy needed the theory of monomorphism to maintain its theoretical castle. Opening the door to pleomorphism would have been a great cost and perhaps a major schism.

Lamenting the above in my article last year that greedy Big Pharma is making huge profits from peddling ineffective and unnecessary vaccines. I cited the [Feb. 23 CNBC article](#) that showed how the vaccine market is now six times bigger than it was 20 years ago, at more than \$35 billion annually today, and providing a \$44 return for every \$1 invested in the world's 94 lowest-income countries.

As the old saying goes, "**Follow the money!**"

Another issue in great need of investigation is 5G because there little is widely known about the dangers of exposure to electro-magnetic radiation. A sharp warning on this came last week in the U.S. law courts. See:

[U.S. Court Rules FCC "Failed" Over 5G Safety Concerns](#)

At **Principia Scientific International (PSI)** we are predominantly of the view that [Integrative medicine](#) is the way forward because it recognizes all of the potential influences on one's health.

Rather than treating mere symptoms, the Integrative approach to human ecology includes all the physical and nonphysical factors of how humans interact with their environment.

But until we all face up to the inherent corruption within the commercial medical sciences little, if any, improvements will be had.
