Proposed new government structure and governance	14
• The new Australian Vision will overarch all government action	16
1. Australia will implement Direct Democracy	17
2. The Australian Constitution will be reviewed	17
3. Australia will be neutral	18
4. The Australian Military will reflect neutrality	18
5. Councils will take over all state and territory functions	21
6. All laws will be reviewed for compliance with new governance	21
7. Elections will be by paper voting forms only with rigorous oversight	23
8. The government will manage Australian financial affairs	23
9. Infrastructure will be majority owned by Australians	26
10. All taxes will be replaced by a single GST on non-essential items	26
11. Electricity will be provided at the lowest practical cost	27
12. Compulsory audits of government and council efficiency & effectiveness	28
13. Regulations & licences will be reviewed for compliance with governance	30
14. Immigration will be aligned with planned growth	31
15. Australia will have short- and long-term growth plans	32
16. Education will return to basics, fact and need-based information	34
17. Impediments to freedom of speech will be removed	36
18. All Australian people will be treated as equals	36
19. Plans for digital ID will be put on hold	37
20. Councils will pay retirement and welfare benefits	38
21. All health and related services will be based on proven benefits	39
22. Environment management will be based on proven benefits to Australians	42
23. A research group will assess dubious information and publish the results	45
Conclusion	51

Summary

The current Labor Australian government and governance performance are widely accepted as working poorly for most Australian people, and this performance is deteriorating rapidly.

This proposal to restructure the Australian government and governance is based on the premise that trying to change substantially the current government within the current governance framework is a fool's errand. It won't work; so much needs changing. There are so many problems with the current government and governance that a complete restructure based on fundamental principles and defined changes and outcomes is essential. Minor changes will inevitably get bogged down in a plethora of complexities, obfuscation and entropy – an accelerating fall into orchestrated disorder and entropy.

A fast-growing proportion of Australia's population is demanding the government fix at least ten key issues: Direct Democracy (albeit not recognised as such), Immigration, Hate Laws, Digital ID, Net-Zero energy plan, Military, Australia Corporation, Paedophiles, Police violence (such as in Victoria during Covid, the recent unprovoked brutality of New South Wales "police" against legitimate peaceful protestors on the streets of Sydney) and corruption. The first 4 have erupted, the other 6 are simmering.

This proposal presents a solution to fix all these failures and problems, and much more. The optimum, most practical approach to implement the proposal would start with a double dissolution. This would be followed by an election with one candidate in each electorate stating publicly that they support this or a similar proposal, and that they will implement it as soon as possible if elected. Will this happen? Not whilst the majority of voters suffer from cognitive dissonance after a lifetime of carefully controlled indoctrination, but check the proposal to overcome this cognitive dissonance below.

The Australian Preferential Voting System has led to results that do not reflect the clear views of voters. For instance, the current Australian government was supported by less than one third of voters – far less now as OneNation leads in the latest polls. Democracy is not meant to work that way. It will be necessary for a new party, or new coalition, to field candidates in every electorate in the next election to optimise the likelihood of their winning a clear majority. Recall the word Democracy is derived from the Greek Demo, meaning 'the people', and Cratos is 'the power'.

An overriding problem for 'people power' is, as is described in several sections of this proposal: what happens when 'the people' have been indoctrinated by a lifetime of false information? Will they apply their 'power' by supporting the indoctrination? Probably yes – until something happens to reverse significant parts of this indoctrination. Consider this video explanation: cdn.realaussienews.com.au/2026/05/Democracy-2.mp4

If all these candidates, including those from existing major and minor parties as well as independents, form a new party, join one existing minor party or form a coalition, and then agree to field only one candidate for each electorate, they will likely win a majority in both houses if – and this is a critical 'if' – sufficient candidates present a credible proposal for a new government and governance that would deliver far better outcomes for most voters, and voters agree with the proposal after overcoming their cognitive dissonance. So, how could that happen?

There would need to be a new party or coalition whose leaders and all candidates first assess, and then improve, a proposed structure and governance, including a new comprehensive vision, strategy and operational plan that all candidates fully understand and support, and that will convince the majority of voters to vote for a candidate who promises to implement fully the vision, strategy and plan as soon as possible. Convincing a majority of voters will need a very carefully constructed communications plan, as described in this proposal, delivered by a large number of alternative media. Mainstream media will certainly do everything in their power to obstruct this plan.

This proposal describes 23 changed areas of government and governance, preceded by a vision for the Australian government. All 23 areas and the vision are interconnected and, together, would lead to massive improvements in every aspect of almost all Australians' lives, to an Australia we can all be proud of, a model for every country in the world to adopt. No timeline is set; just asap.

The 23 areas overarched by the vision are:

- The new Australian Vision will overarch all government action
- 1. Australia will implement Direct Democracy
- 2. The Australian Constitution will be reviewed
- 3. Australia will be neutral
- 4. The Australian Military will reflect neutrality
- 5. Councils will take over all state and territory functions
- 6. All laws will be reviewed for compliance with new governance
- 7. Elections will be by paper voting forms only with rigorous oversight
- 8. The government will manage Australian financial affairs
- 9. Infrastructure will be fully owned by Australians
- 10. All taxes will be replaced by a single GST on non-essential items
- 11. Electricity will be provided at the lowest practical cost
- 12. Compulsory audits of government and council efficiency & effectiveness
- 13. Regulations & licences will be reviewed for compliance with governance
- 14. Immigration will be aligned with planned growth
- 15. Australia will have short- and long-term growth plans
- 16. All education will return to the basics and fact-based information
- 17. Impediments to freedom of speech will be removed
- 18. All Australian people will be treated as equals
- 19. Plans for digital ID will be put on hold
- 20. Councils will pay retirement and welfare benefits
- 21. All health and related services will be based on proven benefits
- 22. Environment management will be based on proven benefits to Australians
- 23. A research group will assess dubious information and publish the results

Every point proposed in the 23 areas could be implemented if the majority of Australians and the government approve them. It is not a question of 'it can't be done'; it can, likely with some improvements to these proposals. But are enough people and future politicians prepared to stand up and be counted? To stand up for what is clearly far better for the great majority of them?

However, and this is a critical point, the proposals in the 24 areas cover hundreds of aspects that the great majority of people will either struggle with or initially outright reject because they are contrary to what most people have been taught or, more accurately, indoctrinated for most of their lives; the initial reaction from most people is likely to be they are just too different

and require too much thinking and discussion. It will therefore be vital that the new party or coalition understands the full eventual scope of the proposal but introduces some of the interconnected details gradually at a pace that most people can absorb and not be turned off by the sheer enormity and interconnectedness of the proposed changes.

A highly competent and credible Research Group will be established at the earliest opportunity to research all available information on selected topics, form conclusions based on the best evidence available and publish their conclusion, referencing supporting evidence. It is likely that some of their conclusions will not be published immediately as it is expected that would cause too much consternation, even riots. Many of the likely research subjects are described throughout this proposal. A gradual approach to dissemination will be necessary to reverse lifetimes of indoctrination causing cognitive dissonance in many, possibly most of the Australian population. However, major progress in this reversal process is essential before a proper level of democracy is achieved and the government delivers optimum services to its voters.

Introduction

Trying to change the current government is a fool's errand. Experience proves it won't work and will inevitably end up with massive frustration at best and likely even worse performance.

Many, probably most, of the general public are now highly frustrated and upset by numerous government actions and plans.

The saying tributed to Albert Einstein: "The definition of insanity is doing the same thing over and over again and expecting different results" describes what is happening to a large extent with our current government.

Objections to the massive number of immigrants were demonstrated a few weeks ago in some of the largest rallies Australia has ever witnessed. There will be more and probably far large rallies across Australia demonstrating Australians' objections to more issues such as listed above.

These rallies will lead to growing demands for a new government and different governance that will fix the problems, and for a new election of parliament and the senate without delay.

Future demonstrations are likely to be about issues in addition to mass immigration, such as the dangers of digital ID, and the lies and costs of net-zero plans, including the costs of power that burden household budgets and cripple many businesses. Other fast-growing worries include the costs and delays caused by excessive regulations, and dictatorial controls on freedom of speech. It is vital for all, including the police, to realise that disrupters will attend these rallies, some paid. In the US, pallets of half-bricks are often left conveniently close to planned rallies for paid disrupters to throw. The mainstream media will focus on the bussed-in disrupters to divert attention from the real message; media are often told where to send their journalists to see the most violent pre-arranged attacks.

This proposal provides brief factual and credible information about these and other current issues that are, and will increasingly, fuel a growing number of people attending the next Australia-wide rallies. It is, however, vital to guard against people infiltrating rallies to divert

the main issue towards a different agenda that mainstream media will focus on. Some powerful and rich sources may covertly back the infiltrators.

Currently most members of parliament and the senate are captured by the political system and have no realistic plans for major change. Just a handful of members have proposed changes, but with no plan as to how this would be achieved.

Journalist James Morrow summed up the current problem in an OpEd in the Cairns Post (30/10/25): *'Australia will never elect a Trump in a system constitutionally designed to protect the political class, but that doesn't mean we're not subject to the same feelings of paralysis that brought about the MAGA movement.'* But it's not just the 'political class' the system protects, it's the unelected unproductive bureaucrats comprising about 10% of the Australian population that really run the country as well as powerful people with vested interests that don't want the system to change, as explained by a previous UK Prime minister, Liz Truss: [Liz Truss: These people REALLY run the UK | Daily Expresso](#) and this video <https://youtu.be/Xq8p0rF6xtc> .

Another description of the horrors of the British government and criminality throughout the country is explained by former MP Andrew Bridgen in this video that should be compulsory viewing for everyone: <https://youtu.be/wLkEWDpVq0A> . Then ask yourself, how much of what Bridgen says also applies to Australia? Bridgen points out that politics is no longer about 'left' and 'right', but more accurately about right and wrong.

This proposal presents a solution to fix all the failures and problems with the present government and governance: a fundamental restructure of the government and governance.

The proposal includes invaluable lessons learnt during the major restructuring of many New Zealand government departments and corporations from the late 1980s and mid 1990 that yielded several fundamental lessons. The most important lesson learnt was that when an organisation is 'broken', that is, it clearly has very poor and deteriorating performance, it is hopeless to try to transform individual parts. Each transformed part will get bogged down by the old guard and the old systems. A partially new structure will likely be sabotaged by the existing incumbents and will retain its previous bureaucratic culture. It is essential to replace the whole organisation with an entirely new structure based on a new agreed set of key principles, strategies, management, objectives, operational plans and employ staff that support the new approach.

The optimum approach to implement the proposal will be for a double dissolution followed by a double election, that is, elections for both parliament and senate at the same time as soon as possible. The current mechanism for double dissolution applies when the Senate twice rejects a bill from the House of Representatives, or potentially if the Governor General dismisses both houses as happened in 1975 when, it has been argued, there was less reason for the Governor General to intervene, albeit for different and disputed reasons, than massive rallies objecting to the government. Another cause of dissolution or forcing a full election that has not happened yet in Australia could be if a large number of members of parliament and the senate resigned.

One, albeit unlikely, possibility is if recent polls in favour of autonomy in Scotland (52%), Wales (41%) and Northern Ireland (41%) are an indication, this could end the Commonwealth, and so Australia's links to and controls from the Commonwealth. King Charles or his

successor, Prince William, might then need to advise or direct the Australian Governor General, Sam Mostyn, to call a double election and change the Australian Constitution.

The current very confused response to the Bondi Beach shootings should consider these lines of the United States Declaration that also provide context for this proposal: *“We hold these truths to be self-evident, that all men are created equal, that they are endowed by the Creator with certain unalienable Rights that among these are Life, Liberty and the pursuit of Happiness. ...That to secure these rights, Governments are instituted among Men, deriving their just power from the consent of the governed,...That whenever any Form of Government becomes destructive of these ends, it is the Right of the People to alter or to abolish it, and to institute new Government.”*

The OneNation party has more potential than other current parties to form a new government based on adoption of the proposals in this report. Many more current members may well join OneNation, but forming a coalition with other minor parties and independent members as well as new prospective candidates, all of whom fully support a new proposal for government and governance, would likely win a clear majority at the next election.

A key problem is that almost all current politicians are locked, mentally, within the constraints of the current system of government and governance. Given that this system is clearly failing badly, how on earth can this system change itself into a new system that will achieve different results? That would be an extended oxymoron, a contradiction in terms. Yet that seems to be what many politicians are trying to do. These politicians that believe that major change is needed will need to recognise the illogic of their thinking and find a way out of their cognitive dissonance.

The OneNation party led by Pauline Hanson and a colleague were sent her to jail for 3 years in 2003 after a dubious trial. This sentence was overturned by the Queensland Court of Appeal and both were released. This is described in detail in this video: <https://youtu.be/R6AGZBSctCs> . OneNation and Pauline Hanson's popularity have risen dramatically in the last year and now lead all other parties in poll. Pauline is now top in the polls for preferred Prime Minister. It was thought that highly criminal, some would say Satanic, powerful and very rich people would do their utmost to prevent One Nation's further rise in the polls and potential to become the next government, and this may have been the case. However, it is now clear that Pauline and OneNation's major back, billionaire Gine Reinhart, is a very influential Zionist, as demonstrated in Reinhart's speech on 18th June 2026 in Townville in which she said, amongst other related points, that Israel should be given land to build a drone production facility. Pauline strongly supports Reinhart and has made several remarks recently that are aligned with Zionist approaches. It is dubious that many members of OneNation will support such obvious Zionist approaches. Whilst some views presented by Pauline Hanson would benefit Australia such as a reduction in immigration, other views relating to Muslim extremism are simplistic and dangerous.

If the Uniparty wins the election, Australia can expect just more of the same: slanging matches, promises, lies and point scoring between Labor, Liberal, National and Greens, and much of it based on directives from foreign or influential local sources. Occasional relief comes when one of a handful of effective members provides a relevant and significant proposal or comment, such as Jacinta Price, Matt Canavan, Malcolm Roberts and Barnaby Joyce. Unfortunately, most of the members offering sound policies and criticisms also have

knowledge blocks such as Pauline Hanson's condemnation of all Muslims and support for Israel. Minimal, if any, action has eventuated to date to resolve Australia's main problems and the demands of '*we the people*'. Modern democracy is sinking fast, and in the direction of Marxist/Communism and its driver, Totalitarianism and World Economic Forum and its bedfellow, a New World Order.

The handful of relatively sound people such as Barnaby, Matt and Malcom have a major problem: **they are thinking largely within the confines of the current government and governance system.** It is very difficult for them to switch away from their current confines into what must be a new system of government and governance. This requires a new way of thinking such as utilized throughout this proposal, as was applied to restructure very successfully many government departments in New Zealand under the Lange triumvirate. The OneNation party needs to bring in people with strategic governance experience to advice on the very different government structure and governance they will need to implement many of their sound policies.

However, far more important is that the next government comprises members that all support a form of government and governance such as presented in this proposal. This probably requires several parties, in particular some minor parties, to field candidates that understand and fully support these or similar proposals. These candidates must have considerable experience in industry; not just working in governments, whether national, state, territory or council where their experience is solely within the current failing bureaucratic system. The next Prime Minister should be a businessperson who has achieved major success, preferably in a private rather than a public company, and has wide spread respect within the company as well as the community.

Another factor OneNation and other minor parties and dissenting members of parliament and senate must recognise is that there are very powerful forces that will do everything in their power to prevent voting then formation of a government that opposes the current Uniparty approach to government and governance that is largely driven by overseas organisations and ideologies.

Much current information from mainstream media is deliberately false from a range of overt and covert influencers, including from international bodies such as the UN such as Kenyan doctors found anti-fertility agents in a UN tetanus vaccine given to over 1m people. This video explains much more about the **UN and WEF agenda to reduce the world's population to 500,000: [Part 5, The Cabal's Evil Engine: the UN](#)** . Note that the UN's insignia shows a flat earth), WHO, WEF, The Club of Rome, the Bill Gates Foundation, the 'Cabal' and messages on the Georgia Guidestones that planned to implement a New World Order in which a self-selected few elites direct the NWO and its overt plans to reduce the world's population by over 90% after another world war and many toxins. Virtually every major war begins under false pretences. In this interview by Tucker Carlson, seen by over 200,000 people, German economist Richard Werner explains what the current global conflict is actually about and how evil people connive to start most wars, including British PM Winston Churchill [Every Major War Begins Under False Pretenses & the Central Banks Are Behind It. Economist Explains.](#) We, the hoi polloi, are mere insects in the eyes of the controlling elite, mostly Zionists (such as the Rothschilds that control most of the world banks), and need to be decimated as we are too many for their future plans.

Recall in Aldous Huxley's frightening book, 1984, the Ministry of Truth's role was to change 'official' history to match Big Brother's changing plans. Now do your research. Huxley's prescient views were 42 years early. It is always useful to ask yourself how any particular issue aligns with the highest-level battle, good versus evil; at present, the former is winning - <https://cdn.realaussienews.com.au/2025/10/Lets-examine-what-Q-framed-2.mp4>

It is vital that everyone does their own research to ensure their views are based on credible, factual information rather than just accepting what they are told, hear or view. As noted elsewhere in this proposal, factual knowledge is vital for voters to make sound decisions in a democracy.

It is also vital that people are not overwhelmed by the many issues, of which only nine are summarised below. For many people, their focus will be on just one of the issues, and that's OK. Implementation of this proposal will fix that issue as well as the other issues.

However, as you read these issues many people are complaining about, bear in mind it is far, far more important to decide exactly what you DO want, that you want a government to fix all these issues and much more. A proposal to do just is below the nine following issues.

Every point proposed in the following 29 areas of changed government structure and governance could be implemented if the majority of Australians and the government approve them. It is not a question of 'it can't be done'; it can, likely with significant improvements to the proposals. But are enough people and future politicians prepared to stand up and be counted? Stand up for what is clearly far better for the great majority of them?

Issues for consideration

1. The Iran war and implications: This issue is already having massive implications for Australia and all Australians. As the situation is changing literally from day to day, it will be covered more fully in this proposal at a later date when some semblance of stability, for better or worse, has been achieved. For the time being, it is worth noting that the great majority of people are being lied to by most politicians and the mainstream media about most key aspects of the background and progress in the illegal, immoral, Zionist and unconstitutional war, genocide and crimes against humanity inflicted on Iran by the Israel and US governments acting as Isreal's enforcer. As of this date, Iran is clearly winning this existential war both on the battlefield and in the opinions of the great majority of non-Western countries. Iran will not negotiate with the hegemonic US as the last two negotiations with the US resulted in the US bombing Iran during the negotiations and murdering Ali Khameina, the Supreme Leader of Iran. US President Trump has been shown to continually lie about Iran and many are concluding he is not just deluded, but no longer of sound mind. Currently, the main effects on Australians are the price and uncertain deliveries of oil, petrol, diesel and fertilizer. Most Australians have entirely false views about Iran, its history and the current war. The last 49 minutes of this video should be compulsory viewing, in particular the dangers to Australia outlined in the last 5 minutes. : [.CITIZENS REPORT 26/3/26 - Ambassador John Lander: the truth about Iran and Australia](#) . The factors underpinning the dangers to Australia in the video are explained in one of the most accurate assessments of the Iranian war situation described in this video interview with Pepe Escobar on March 28, 2026: [Pepe Escobar: Iran RAINS Missile HELL on Israel & Gulf, Trump's Invasion COLLAPSES](#) . Kay points he notes that most members of the Australian government and mainstream media appear to be totally unaware of, or misinformed about, are:

- a. The Iran war is primarily about the end of the US hegemony that started in 1945
- b. Ending this hegemony includes ending the domination of the petrodollar

- c. The US hegemony and unipolar war is being replaced by a multi-polar world
 - d. Part of the US hegemony is control of the world's finances and Western governments by Zionists
 - e. The great majority of Western views of Iran, including Australians, are false
 - f. Australia's Foreign Affairs Minister Penny Wong has embarrassed herself and the federal government in Australia with [her lies about the Iran war](#). Prime Minister Anthony Albanese's "[Address to the Nation](#)" speech on Wednesday (1/4/26) started with a massive lie in the first 20 seconds when he said, "Australia is not an active participant in this war."
 - g. The US declaration of war against Iran followed the US and UK governments taking control of Iran nearly 50 years ago in order to steal the oil resources.
 - h. The US President Trump and his closest supporters have become irrational and controlled by, or are, Zionists.
 - i. There is a very serious danger that a combination of the US and Israeli forces will start a nuclear war.
 - j. Continuation of President Trump's irrationality is likely to lead to a major world recession and defeat of Israel and the US forces unless US imperialism, hegemony, war crimes and genocide that has grown since the end of WWII is removed very soon.
 - k. One of the best descriptions of the current and past world of wars fiasco is described in this video, together with how the world, in particular the Western world, must change fundamentally away from the last 500 years of hegemony and imperialism: [Iran RAINS MISSILES on EIGHT US Bases as Trump's Attack BACKFIRES | KJ Noh](#). However, the latest information on 1 July 2026 explained in this video [BREAKING PEPE: The MOU 'Coma' Was Fake-Iran, Oman and Pakistan's SECRET Gulf Plan](#) is that all regions and states in the Middle East are working towards full alignment and cooperation, sponsored by the Chinese government, but with the exception of Israel, and that the US and EU will have not chance of preventing this.
2. **Direct Democracy:** This form of democracy, first applied in ancient Grecian times, is defined as *'a form of government in which policies and laws are decided by a majority of all those eligible rather than by a body of elected representatives: direct democracy gives all people the right to participate.'* Numerous governments over the last 50 years have largely ignored this fundamental aspect of 'proper' democracy, as evidenced by many government attempts to usurp last year's YES vote, both before and after the vote.
3. **Immigration:** Immigration is currently excessive and ruinous to the Australian economy and way of life, causing and exacerbating a wide range of problems as well as underpinning some nefarious and covert agendas. This was the key subject of the recent mass rallies. But the government is not interested in views contrary to their dubious related plans. For instance, the government recently allowed ISIS Muslim brides to return to Australia, which is also widely condemned.
4. **Hate Speech laws:** Current laws make it unlawful for anyone to issue unspecified 'hate speech', as determined by some faceless bureaucrat. These laws, and the drivers for their inception, have been widely vilified world-wide. The laws are clearly racist (which, supposedly, is unlawful) as they apply only to Jews and Islamists. But, because of the Bondi Beach murders (a Royal Commission has at last been agreed to), the Hate Speech laws have been extended, with very dubious logic, to tighten gun laws, as happened after the very questionable Port Arthur shootings. The multi-page law was introduced to Parliament only

3 hours before the vote, so no member had time to read it, yet most passed it, with only a few principled members voting against it. This is yet another example of the government acting against the interests of the vast majority of Australians, and in the interests of a few massively-powerful, some say evil, interests.

5. **Digital ID:** The immense dangers of digital ID, facial recognition, digital censorship and current plans to introduce digital ID into Australia are submerged in government misinformation. A fast-growing number of people now understand the dangers such as plans to use a state or territory driver's licence to biometrically verify their identity through facial recognition. Numerous people are demanding withdrawal of this and all related plans. Then there is digital ID's bed-fellow, digital currency, that is intended to allow the state to take over control of everyone's lives, as is happening in part in China, although not nearly to the extent portrayed in Western media. It appears that the government is listening only to those planning a New World Order. However, even the mainstream media are starting to wake up to the dangers from "politically-motivated authoritarians", as Rowan Dean of Sky News explains: <https://cdn.realaussienews.com.au/2025/10/Wake-up-Aust-2.mp4>
6. **Net-zero energy plan:** 'Net-Zero' has become a hateful word. The lies told by Labor Prime Minister Albanese and Energy Minister Bowen are now revealed: <https://youtu.be/7wnofyxrT6U> (31/10/25). The real costs of current net-zero plans should be presented including all-of-life costs as well as shocking power bills forecasts for households and businesses, and the skyrocketing numbers of businesses going broke. Compare these figures with other countries. Australia used to be amongst the best; now it is close to the worst by numerous measures. Accurate reports are available proving Australia's dismal performance and explaining the climate change (nee global warming) furphy and the role of the UN IPCC in this disaster. There is no credible evidence that supports net-zero; it's all about ideology, lies, ideology and profits. Australia could again have amongst the lowest cost of reliable electricity in the world. Think of the resulting surge in power-hungry export industries. Senators Matt Canavan and Malcolm Roberts' accurate views on net-zero and the 'climate change' lies should be noted: [Matt Canavan's bill to repeal Net Zero: How will the Liberals vote? - www.cairnsnews.org](http://www.cairnsnews.org) as well as this video that explains how 'green' sustainable energy is failing around the world, including the critical issue of grid stability: <https://youtu.be/gaCf6GCYykg>.
7. **Military:** The huge total cost to taxpayers for maintaining the current military should be presented with a complete breakdown available, noting that most costs are for equipment and systems suited to the last war, and few of the current costs will be required for optimum asymmetric defence when Australia is neutral. More related information is presented in the next section items 4 and 5.
8. **Australia Corporation:** It is likely that US President Trump will announce shortly that the US has been a corporation for nearly 200 years, so the current \$38Tn (the real sum is more like \$250Tn) is owed by the US Corporation, which is bankrupt. How President Trump restores the US to a Constitutional Republic or whatever, only time will tell. But this may lead to recognition by the Australian government and general public that Gough Whitlam registered Australia as a corporation in 1973 without changing the Australian Constitution.

If and when related facts are revealed, the general public will be horrified. There is incontrovertible evidence in numerous documents concerning the corporate status and changes to documents such as changing the Queen's title, but politicians and law practitioners choose to turn a blind eye. For how much longer? If this premises is proven, the most feasible outcome is for the Governor General to call for a double dissolution.

9. **Paedophiles:** If and when the 1997 Wood Royal Commission report is released, it is understood it will reveal information about paedophiles in high place that will disturb most people. Then-Senator Bill Heffernan's public demand for release of the report was denied. This report has been covered up at the highest levels of government and the judiciary. The reason given was that it would destroy confidence in the government. Quite so. When will the report be leaked? [Senator Bill Heffernan and the Wood Royal Commission \(2015\)](#) and <https://cdn.realaussienews.com.au/2026/07/Australia-Pedo-Protection-Racket.mp4> . Is the same, or worse, still happening? Consider too the 2009 Heiner Affair where the report proving rape and corruption in Queensland institutions was covered up by Kevin Rudd and Governor Quentin Bryce amongst others. At long last, information is being publicised such ABC's Four Corners program titled "Hunting Ground: Childcare Exposed", which was broadcast on Monday (27/10/25) '....but with less than 1 per cent of offenders convicted...': [Hunting Ground - ABC News](#) . This video provides another example: <https://cdn.realaussienews.com.au/2026/02/Qld-Uni.mp4> . There is much evidence that the real situation and cover-ups are far, far worse. Why the deafening silence from officials, including the judiciary?
10. **Police violence:** Articles and videos of police violence, although very limited and rare, including during Covid, and the resulting cover-ups by senior police, will remind people of recent completely unacceptable behaviour, more suited to a police state or dictatorship. Legislation allowing mercenaries into Australia to act as Police should be revoked.
11. **Corruption:** A growing number of proven cases of corruption are being publicized, described by one journalist as 'industrial scale rorting and ripoffs. As reported in The Australian: *'The latest example is Premier Jacinta Allan's 18-month-old referral to Victoria's anti-corruption watchdog over alleged CFMEU corruption has been released, revealing she urged the agency to investigate any serious conduct within its remit. It also comes as Opposition Leader Jess Wilson announced on Sunday her terms of reference for a proposed royal commission into misconduct, vowing to "follow the money" to "chase down every single cent" of the estimated \$15bn in blowouts caused by the CFMEU corruption and criminality on Big Build sites. Ms Wilson said the "tepid referral" didn't come close to "capturing the scale of wrongdoing under Premier Allan and Labor"'*. Numerous other examples are now evident, often with governments and their minions at best turning a blind eye. More examples are described in these shocking videos: <https://youtu.be/8tFpAcT9vRU> and [BRITISH CIVIL WAR COMING AS ANDREW BRIDGEN EXPOSES DEEP STATE PLOT TO BAN ELECTIONS & KILL RIVALS](#) in which ex-MP Bridgen notes similarities between the UK and Australia.

The majority of people have been deliberately and consistently indoctrinated from birth with so much misinformation that they are likely to vote against a government candidate who is proposing solutions that are genuinely in the voter's best interests. If that sounds like a

conspiracy theory, do your homework and always ask three questions: cui bono (who stands to gain)? Is there credible evidence supporting the view? Is it part of the anti-humanist New World Order agenda? A good starting point is to watch these two videos to the end: www.youtube.com/watch?v=ZFHHOBiUrkg and <https://cdn.realaussienews.com.au/2025/10/Masonic-DC-2.mp4> .

Another salutary explanation of the world we live in is explained in the SGT video interview with one of the most politically knowledgeable people in the world, Harley Schlanger, head of the Larouche organisation. Schlanger notes the race is between good and evil; who wins the hearts and minds of ordinary people, the voters, that are being constantly indoctrinated by politicians, anarchists and media controlled by evil forces? [THE HORRIBLE TRUTH ABOUT EVERYTHING -- Harley Schlanger](#) .

Another vital aspect to understand Australia's place in the world, and where Australia should be aiming to be if it is to be part of the future much better world that is emerging rapidly, is to understand how the imperial Western world took control, but is collapsing fast. This is explained well in this video interview: [Richard Wolff: The New Atlantic Hierarchy - Europe From Ally to Vassal](#).

Most people will find the unvarnished truth very uncomfortable, very difficult to comprehend when they suffer from cognitive dissonance. But democracy doesn't work if voters are misinformed and fails to protect the rights of minorities, as Socrates found out, in which case a republic may be superior form of government. Karl Marx and Saul Alinsky realized that the way to take control of a society is to destabilize it with false information: "*You destabilize it by destroying Judeo-Christian values, and you destabilize it by creating civil unrest and revolution.*". Fortunately, a fast-rising number of people are 'waking up', realising they have been indoctrinated and controlled for most of their lives, recognizing the disinformation they have been fed for what it is, and switching into their own world of consciousness where there is always more to know.

However, and this is a critical point, the proposals in the 24 areas cover hundreds of aspects that the great majority of people will either struggle with or initially outright reject because they are contrary to what most people have been taught or, more accurately, indoctrinated for most of their lives; the initial reaction from most people is likely to be they are just too different and require too much thinking and discussion. It will therefore be vital that the new party understands the full eventual scope of the proposal but introduces some of the interconnected details gradually at a pace that most people can absorb and not be turned off by the sheer enormity and interconnectedness of the proposed changes.

A highly competent and credible Research Group will be established at the earliest opportunity to research all available information on selected topics, form conclusions based on the best evidence available and publish their conclusion, referencing supporting evidence. It is likely that some of their conclusions will not be published immediately as it is expected that would cause too much consternation. Many of the likely research subjects are described throughout this proposal. A gradual approach to dissemination will be necessary to reverse lifetimes of indoctrination causing cognitive dissonance in many, possibly most of the Australian population. However, major progress in this reversal process is essential before a proper level of democracy is achieved

Recall Ghandi's quote "***First they ignore you, then they laugh at you, then they fight you... then you win.***"

Proposed new government structure and governance.

This proposal describes 23 areas of government and governance, followed by a vision for the Australian government. All 23 areas are interconnected and together will lead to massive improvements in every aspect of almost all Australians' lives, to an Australia we can all be proud of, a model for every country in the world to adopt. Because of the interconnectness, several aspects relate to several of the 23 areas, so some repetition in the explanations below are inevitable.

Bear in mind that the Australian 'government' is the mechanism, the organisation, to implement 'governance', that is, management of Australia as a nation that must be democratic, that is, for and by the people. So, government should be all about delivering what most people want. The catch here is that most people's 'wants' and expectations have been manipulated for most of their lives by an onslaught of lies and indoctrination. A 'Catch-22'.

However, and this is a critical point, the proposals in the 23 areas covers hundreds of aspects that the great majority of people will either struggle with or outright reject because they are contrary to what most people have been taught or, more accurately, indoctrinated for most of their lives; they are just too different and require too much thinking and discussion. It will therefore be vital that the new party or alliance understands the full eventual scope of the proposal, modified as they see fit, but introduces some of the interconnected details gradually at a pace that most people can absorb and not be turned off by the sheer enormity of the proposed changes.

It is repeated here that all points are interconnected to a greater or lesser extent. Many of the proposals below are noted in one category but relate to one or more other categories. Another vital point is that this proposal does not present any timetable for implementation; this will be very complicated, take enormous amounts of skill and diplomacy, will depend on many forthcoming international changes and may take several years to complete some aspects.

Six key points overarch the 24 following sections:

- A. It is not possible to calculate the cost of implementing this proposal. There will be some relatively minor short-term costs, but longer-term there will be massive gains, not only financial, but benefits in every area of life.
- B. These gains will not come from just one of the 24 sections described briefly in this proposal; the gains will come from a combination of successes in all 24 sections. No one area is stand-alone; every section is interconnected.
- C. Each of the 29 sections is described only in summary apart from the vision; far more details will be necessary, including implementation plans, for each section.
- D. Do not be overwhelmed by the massive amount of information summarised in the 24 sections; few people will fully understand all of them. But, as noted above, they are all interconnected and all are very important.
- E. The proposed government structure and governance will focus on: **Telling the whole truth and serving 'we the people'.**
- F. Every point proposed in the 24 areas could be implemented if the majority of Australians and the government approve them. It is not a question of 'it can't be done'; it can, likely with some improvements to the proposals. But are enough people and

future politicians prepared to stand up and be counted? Stand up for what is clearly far better for the great majority of them?

A natural reaction to most people reading these proposals for the 24 areas described below will be to say, that's impossible. A wise philosopher once said "Whether you think you can, or you think you can't, you're right".

Experience gained from implementing radical restructuring of government departments and their governance, in particular identified in such projects in New Zealand in the late 1980s and 1990s, that attempts to change just one or a few problem areas failed. These failures were mainly because the changes, however sound, were inevitably bogged down in the old ways of thinking and doing things, the old culture, measures, planning, systems and management approaches.

There are three basic approaches to complete restructuring:

1. Identify the parts of the structure, strategies, policies and actions that are causing the main problems, and change each of these areas; or
2. Define what you want to achieve overall and what is required to deliver this;
3. Define a new organisation and associated governance that will deliver these requirements; then
4. Build this new organisation, including any parts of the previous organisation that will fully support the new organisation and its governance approach.

Item one is generally understood by many people, although many people have been indoctrinated for most of their lives leading to false understandings, as explained in several sections of this proposal.

Item two is described in the 24 areas below.

Items three and four will be extremely difficult but nonetheless are achievable, as demonstrated by previous major restructuring project. Some key success factors will be:

- a. An excellent leader, the Prime Minister. He or she must be highly respected, a natural leader with proven experience who fully understands all related issues and can explain these to all Australians. He or she is likely to have owned and managed a significant manufacturing or service industry company and won the deep respect of his/her staff. Examples would be ex British MP British MP Andrew Bridgen and British MP and new Restore Party leader, Rupert Lowe.
- b. The Prime Minister will lead an executive group whose primary role will be to oversee the implementation team and select government department/group leaders, or ministers.
- c. An exceptional implementation team comprising the best practitioners in the world with proven track records. This team will start by expanding the initial government structure and governance designs.
- d. A high level of support and understanding by a clear majority of members of parliament and the senate.
- e. A highly capable research group, assembled at the earliest possible time before the election, to assist in presenting factual information with credible supporting data to all Australians in order to overcome widespread cognitive dissonance and contribute to voters making sound voting decisions.

The new Australian Vision will overarch all government action.

The proposal for a new vision for the Australian government, governance and Australian people is presented below. ***This vision will overarch all aspects of Australia's government and governance and serve as a reference to guide all decision-making.***

- a. The overriding objective of the Australian government and its governance is to ensure Australia achieves and maintains its vision, as follows:
- b. Ensure Australia is governed within the directives of the Australian Constitution. *Note: It is likely that the current constitution will require updating to reflect current and future issues. Any changes will need to be agreed to by Australians in citizens' referenda.*
- c. Maintain Australia's independence from foreign entities.
- d. Ensure the Australian people:
- e. Are protected from any significant aggressors, in particular, foreign.
- f. Have freedom of expression, religion and association.
- g. Have equal rights.
- h. Have respect for the freedom and dignity of others.
- i. Have ample opportunity for comprehensive education and meaningful work.
- j. Have a fair system of justice that best protects their rights and property.
Commitment to the rule of law and Parliamentary democracy
- k. Manage immigration to ensure all immigrants contribute significantly to Australia's culture, lifestyle and economy.
- l. Ensure Australia is self-sufficient to the extent that this improves the Australian economy and Australian people's lifestyles.
- m. Ensure all Australians have opportunities and information that enable them to optimise their health and happiness.
- n. Ensure all parts of the Australian environment are as clean, attractive and beautiful as is practical for the benefit of present and future people, livestock, water and vegetation.
- o. Ensure Australia's government and governance reflect Australia's vision and values: telling the truth, love, compassion, forgiveness, humility, faith, integrity, honesty, service to others, stewardship, minimising causes of fear and *"Do unto others as you would have them do unto you"*.

Australia should also have a Declaration of Independence as a corollary to the vision, **similar** to the United States of America Declaration agreed in Congress, July 4, 1776, but modified to cover the different dependencies and influences Australia has encountered and is encountering in 2026.

The unanimous Declaration of the thirteen united States of America, When in the Course of human events, it becomes necessary for one people to dissolve the political bands which have connected them with another, and to assume among the powers of the earth, the separate and equal station to which the Laws of Nature and of Nature's God entitle them, a decent respect to the opinions of mankind requires that they should declare the causes which impel them to the separation.

We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain unalienable Rights, that among these are Life, Liberty and the

pursuit of Happiness.—That to secure these rights, Governments are instituted among Men, deriving their just powers from the consent of the governed, —That whenever any Form of Government becomes destructive of these ends, it is the Right of the People to alter or to abolish it, and to institute new Government, laying its foundation on such principles and organizing its powers in such form, as to them shall seem most likely to effect their Safety and Happiness. Prudence, indeed, will dictate that Governments long established should not be changed for light and transient causes; and accordingly all experience hath shewn, that mankind are more disposed to suffer, while evils are sufferable, than to right themselves by abolishing the forms to which they are accustomed. But when a long train of abuses and usurpations, pursuing invariably the same Object evinces a design to reduce them under absolute Despotism, it is their right, it is their duty, to throw off such Government, and to provide new Guards for their future security.

- 1. Australia will implement Direct Democracy:** This form of democracy, first used in ancient Grecian times, is defined as ‘*a form of government in which policies and laws are decided by a majority of all those eligible rather than by a body of elected representatives: direct democracy gives all people the right to participate.*’ Numerous governments over the last 50 years have largely ignored this fundamental aspect of ‘proper’ democracy, as evidenced by many government attempts to usurp last year’s YES vote, both before and after the vote. As British Prime Minister Churchill reminded us, democracy is the worst form of government except for all the others. The word democracy comes from the ancient Greek words *demos* – people – and *kratos* – power. The word literally means ‘people power.’

The Swiss political system is widely regarded as the most effective example of Direct Democracy in the world. It has one federal and twenty-six local (cantonal) parliaments, but the power rests firmly with the people via a system of frequent referenda. There are three types: Mandatory referendums, Optional referendums and Popular initiatives. A mandatory referendum is triggered when the Swiss government wants to revise the constitution, a requirement of the Australian Constitution. An optional referendum happens when the people drive an objection to a decision taken by the government. A popular initiative originates from the people directly and is not a reaction to something the government is already doing. These referenda are usually batched together and put to the *demos* four or five times a year.

There will be regular and comprehensive referenda on major subjects, with the government required to comply with the majority of voters. As noted above, referenda are an essential part of direct democracy as well as required by the Australian Constitution. The government will not attempt to influence referenda, as happened during the ‘Yes’ referenda. The resounding ‘No’ vote was largely ignored by the federal government and Victoria State government. What does that tell you about democracy in Australia? Democracy fails if it does not protect the rights of minorities, as Socrates found out.

The new government will adopt Direct Democracy as soon as possible, and present details for a referendum as soon as possible.

2. **The Australian Constitution will be reviewed:** The Australian Constitution will be fully reviewed and changed to meet the needs of Australia in 2026 and the future. All changes will be made following full disclosure to the general public and referenda following the implementation of Direct Democracy. For instance, a change will be required to allow the proposed cessation of states and territories. Mooted changes in the UK governance and royalty may lead to the need for changes in Australia's relationship with the Commonwealth. The Research Group will review and assess a wide range of documents, with assistance from people with knowledge on the subject, concerning the correct adherence to the 1901 Australian Constitution, the degree to which aspects have been changed such as the Whitlam government in 1973, and the constitutionality of subsequent related changes. These changes and related questions are documented in many articles, books and videos such as [!!!!**his is a *ost *mportant *document - petersenior42@gmail.com - Gmail](mailto:petersenior42@gmail.com), several articles by Dick Yardley and Nuggets News. The documents cover many more related subjects such as finance and the corporate status of Australia.

Several aspects of the Australian government and application of the Australian Constitution are questionable as to their legality and closed processes. These will be assessed by the Research Group and their findings and conclusions publicized. This will include the Commonwealth Club located at 25 Forster Crescent, Yarralumla, ACT.

3. **Australia will be neutral:** The advantages to Australia from being neutral are massive for many reasons including costs, security, foreign relationships and trade. Everyone should listen to Col. Douglas MacGregor explain why the world is changing from hegemonic, some would say Satanic, Zionist, megalomaniacal drivers in the US and UK for the last century into a multi-polar world. Some of the most long-term successful countries in the world are neutral such as Switzerland and Singapore. Australia must align itself with the new fair and cooperative world order - [Colonel Douglas McGregor on Russia's EMP Space Weapon - Best Speech of the Century | Alternative | Before It's News](#). Australia should never accept any directive from any international body such as the unelected UN. Australia should aim to have friendly relationships with every country. The military and foreign relationships should all be fully transparent rather than often secretive as at present. Australia and its people should aim to be on friendly relationships with other countries' people. This section should be read in conjunction with the next section 6 Military.

4. **The Australian Military will reflect neutrality:** Assuming the Australia is neutral, the huge total cost to taxpayers for maintaining the current military should be presented with a breakdown available, noting that most costs are for equipment and systems suited to the last war, and few of the current costs will be required for optimum future asymmetric defence when Australia is neutral. The following parts of this section as presented in considerable detail because most is misunderstood by the great majority of Australians who would likely reject the proposal for neutrality unless they are correctly informed.

There is concern that the US may involve Australia in a war Australia, as so many times in the past, should have no part of, real or fictitious such as the 'war' against ISIS, an 'enemy' set up and financed by the US CIA - [Is the United States a 'Dangerous' Ally? –](#)

[The Diplomat](#) . Similar applies to the wars in Iraq and Afghanistan. For instance, the official history of WWII notes the US saved Australia from invasion by the Japanese. However, the reason Japan entered WWII was because the US cut off supplies to US in order to tempt Japan to invade Pearl Harbour (President Roosevelt knew the attack was coming but did not tell the Hawaiian commanders) that would in turn switch US public opinion to support the President Roosevelt's plan to join the UK and Russia and Stalin's war against the Germans who had been trying hard to negotiate peace (recall UK PM Chamberlain's 'peace in our times' that Churchill rejected).

The latest invasion of Venezuela by the US is described in a presentation to the UN Security Council on 7 January 2026 by the highly respected Jeffrey Sachs: https://youtu.be/rTCnOD_szRw. A broader accurate view by Prof Sachs explains how the US is continuing its warfare across the world, currently Iran: <https://youtu.be/C9WEbYV3XZU>. Another threatened US invasion is Greenland: <https://youtu.be/9uN7NUB4-O4> . No doubt the US will be upset by Australia's neutrality, particularly given the major growth in their military in Australia – see <https://youtu.be/V5SrswcJHQ8>. The US has led or organised almost every war, assassination, related media manipulation and coups around the world as well as extensive illegal sanctions, about 100 wars and coups, since the end of WWII, mostly not allowed by the UN Charter. The US is in effect controlled by the Israeli President Bibi Netanyahu and his Zionist colleagues. Note too that Prof Sach's short video above, you would have heard him mention the bloody 2014 US Maidan regime change in Ukraine. *What Prof Sachs does not mention is that Ukraine's laws were changed after the US-led coup in 2014 led by the US Secretary for State, Vitoria Nuland, in order to persecute the 15 million ethnic Russian population that were the majority in the Donbas and Novorossiia regions, including killing about 14,000 people in the Donbas region. Many in the new Ukraine armed forces, trained by the UK and EU, are self-proclaimed Bandera Nazis. The purpose of that was always to provoke the proxy war against Russia. Russia's sole purpose in that war was the protection of those people. Not acquisition of land. None of the three peace agreements between February 2014 and March 2022 that NATO frustrated had involved any exchange of territory. The USA and NATO had two objectives: securing Russia's resources and destroying their power. The Australian government and most Australians foolishly support the US, UK and EU and NATO's Ukraine proxy war to which Australia has contributed over \$1bn in money and equipment.* This video by Scott Ritter explains more: [Former senior member of the Ukrainian security service \(SBU\)](#).

What sense does it make to align with such a warring nation that focuses on illegal hegemony and imperialism? The US military has already established bases around Australia and Western Australia and is building accommodation for permanent postings of US Navy and Marines in readiness for the elusive AUKUS submarine program that will cost five times the entire annual defence budget. Several other military or similar facilities around Australia such as Western Australia and Queensland (eg Thagaminda) are growing rapidly – these will be revealed and, unless they are proven to be part of Australia's future defence system, will be removed or overseas owners told to remove them. Australia's ageing Collins-class submarines will receive \$11bn worth of upgrades to extend their life for another decade, and to bridge the capability gap before the scheduled arrival of the first AUKUS vessels in 2032. This is not to protect Australia, rather it makes Australia a potential target. The US military relies on the threat of, or

actual, wars to support their military/industrial complex. Why partner with the country that has caused almost all wars around the world since WWII? Why spend billions of dollars on nuclear submarines that would be unnecessary when Australia is neutral? Why be part of the Five-Eyes (set up in 1946 at the start of the Cold War) when the US, Canada and the UK have all brought in extreme authoritarian legislation with restrictions on citizens, controlled by unelected bureaucrats, and are planning worse. For instance, whilst the UK's role in the past included bringing civilizational benefits to the lands of India, Australia, New Zealand, Canada, South Africa and so on, this same empire and its City of London also brought us the international banking cartel, the British Rothschilds, Adam Smith and the British East India Company, Thomas Malthus and Malthusian theory, Darwin and evolutionary theory, Dalton and eugenics, Marx and Engels (both were German but lived in exile in England), and the Fabian Society, which profoundly influenced the Australian Labor Party. Other groups that contribute to global social engineering and world manipulation include the Tavistock Institute, the Brookings Institute, the highest level of the Freemasons (33+), parts of the Vatican Church (see video about the demise of Pope John II - [This Pope Was Murdered After 33 Days to Hide the Vatican's Links to Freemasons & the Mafia \(Video\) | Alternative | Before It's News](#)), the Committee of 300, Zionist Christians, MI6, Henry Jackson Society and Chatham House (see [Britain's Most Powerful Secret Organisation: Chatham House Exposed](#)).

The current system whereby the Australian Defence Department has undue influence and control over the minister will be reversed. No overseas military will be stationed permanently in Australia; all current overseas military personnel will be requested to leave Australia within a reasonable period. The facility at Pine Gap will be issued with the required one-year notice to close, no doubt to the consternation of the US CIA that in effect has always managed this highly secretive facility, as described in this article: [The role of the United States in the dismissal of the Whitlam Government](#) .

This video with Tucker Carlson interviewing Col. Douglas Macgregor explains the US' ludicrous threats against Venezuela; the first hour really is essential viewing: [Tucker and Col. MacGregor Warn How Neocons re Exploiting the Drug Crisis to Drag America Into War](#) – they hint at, but don't explain, that it all comes back to several billionaire Zionists that are determined to control the world under the directives of their god Satan. That includes overt and covert control of most people in the US Pentagon and members of the US Congress. Australia should avoid any involvement in this unholy mess until it is resolved in the US – hopefully by the genuine 6-foot 3-inch President Trump (this relates to a very complicated but unproven view of how the USA is controlled now by the 'good' element of the US military, as explained in this video: [NewsTreason: Full Intel Drop 1.25.26 - Trump & Q Secret Military Op, Time To Jail These Traitors; Major Military Alert! | Prophecy | Before It's News](#)). However, if the US November 2025 National Security Strategy is implemented fully, this should partially change Australia's views of US, including its past activities if the US government admits to its highly hegemonic history, including the Satanic and Zionist aspects and past government lies such as the weapons of mass destruction in Iraq and invading many other countries such as outlined in the Project for the New American Century (PNAC) that preceded 911 by 12 months and stated the US would attack 7 countries in 5 years including Iraq, Libya, Afghanistan and Syria (<https://youtu.be/dGTgvBBa5Dg>). Regrettably, the document states 'we will be unapologetic about our past...' and continues to focus on leading the world, in particular

the Western hemisphere with some variation in the Monroe doctrine. This is far from a win-win document with the rest of the world. Very disappointing.

Several allegations as well as charges and demotions have been made against soldiers over recent years, most notably very dubious and palpably concocted and confused case against Ben Roberts-Smith VC MG. This video is worth viewing to understand some aspects: [BEN ROBERTS-SMITH ARREST: Law Expert Breaks Down What's Really Going On](#) and [Commando breaks silence on Ben Roberts-Smith arrest](#), and this article that explains in detail the abject failures of the current prosecution: [Australia, an emerging International Outlier and Pariah Jurisdiction! - petersenior42@gmail.com - Gmail](#). Very few have been tested by charging in a jury-trial court of law, as should have been the case. A Commission will be set up for any soldier, past or present, that considers he or she has been treated unfairly can present their case. This commission will have the power to recommend changes to both the process and the law, together with full and transparent explanations. It will also be essential to examine and form views on the wider aspects such as why go to war in the first place, and accountabilities at the highest levels.

And last but far from least, Australia and its defence strategy should learn the lessons from Sun Tzu, including about costs and risk assessment. *Everyone, including all members of the Australian government and media, should listen to this description of the current US warmongering by the (possibly fake) US President Donald Trump. All the information Prof Jeffrey Sachs states is totally correct the fully checked:* <https://youtu.be/kitnLbF9WUs> & [‘Deep Dark Son Of A B**ch’: Jeffrey Sachs Loses Cool At Netanyahu's Iran War Push | US News](#). It is also worth checking the photos of Donald Trump next to VP Vance at the funeral of Lindsay Graham, the extreme Zionist. VP Vance is 6 feet 2 inches and is clearly considerably taller than the ‘President Trump’ in the photo. Trump is known to be 6 feet 3 inches. So, yet another example demonstrating that the President Trump we see is a fake.

- 5. Councils will take over all state and territory functions:** All states and territories will be disbanded, with all necessary roles as well as some federal roles taken over by local councils. **This change will require changes to the Constitution and preceding referenda.** This change will remove large amounts of duplication and confusion and contribute considerably to the proposal for direct democracy as well as contributing to most other parts of this proposal such as efficiency and effectiveness, and growth.

Council boundaries will initially remain as at present, but may councils will assess whether their boundaries reflect their communities optimally. After extensive consultation with their and adjacent councils and communities, the boundaries may change, and more or possible less councils may result.

Councils will become corporations, with local voters the sole shareholders. Some aspects of corporate law will need to be modified. The federal government will be far smaller. Councils will collect the new GST tax that will replace all other domestic taxes (see Section 15 Tax and Accounting) and pay for all local services, including education, hospitals, police, judiciary and infrastructure. Council activities and finances will be totally transparent. Most legislation that currently governs local government will be removed. The two previous referenda on council concerned direct federal funding of councils, and recognition in the Australian Constitution, so are not relevant. It will be necessary to somehow bail out the Victoria State government that is broke and Melbourne is besieged by violence under the

draconian Labor government ([‘Melbourne is dying’: Victoria’s ‘out of control’ crime impacting cities’ liveability](#)). It will also be necessary to review every state and territory law as to whether this should simply cease because it does not align with the new governance or be transferred in some modified form to national government or relevant councils. For instance, Victoria’s Statewide Treaty Bill would cease.

Councils may contract out delivery of some services but also deliver other services by their own staff and facilities. Councils as well as the central government currently have a well-deserved reputation for poor management of both services and projects. They will all have to learn to manage far better, both contract management and management of direct service delivery at least as well as best-practice corporations.

6. **All laws will be reviewed for compliance with new governance:** All laws will be reviewed for compliance with the new Australian vision and governance, and the modified Constitution. Australia will change from Maritime Admiralty Law, administered by the Bar Association with no constitutional authority and no legitimacy, to Common Law, that has a fair and proper basis aligned with Australia’s new governance. It is very likely that many current laws will need to be changed, and some removed. Other aspects of current legal procedures will be reviewed for compliance with the new governance approaches, including setting time limits for judges to deliver findings and sentences that are far too long in many instances, for instance, a recent delay of 2 ½ years was ridiculous. There are other complications to remove Admiralty Law, including exactly who was and maybe is still enforcing them, what, if any, jurisdiction they have over Australia, including English Royalty and past rules of the Commonwealth. The apparent removal process in the US is described in this video: [America legally restores its sovereign state during King Charles’ visit - petersenior42@gmail.com - Gmail](#) .

Widespread evidence including articles, videos, whistle-blowers and victim interviews, prove there is child and human trafficking in most, if not all, countries, including Australia, and has been for many years. It is a massively profitable activity. **This video should be listened to twice, from the 17th to the 52nd minute. TIME TO CONFRONT THE PHARAOHS, IN COURTS, WITH JURIES. It explains how far the government and legal system have strayed from what was clearly laid down in the 1901 Australian Constitution.** The evil drug adrenochrome is produced from children and used worldwide. When these activities are identified, they will be stopped, and the most serious criminal charges will be laid. As noted in Issues 7. Paedophiles, the Wood Royal Commission report will be released, as will other evidence of corruption inside the Australian Judiciary, including the material revealed in these videos concerning widespread paedophilia and satanic corruption including: [Australia's Darkest Secret AU 🗿 🦴](#) and [\(618\) Australian Politics: Pedophilia & Corruption - Dale Holmes - YouTube](#) . The Research Group will also investigate other related issues that have been officially silenced such as Satanic abuse claims and the Beaumont Children disappearance, as referenced in many Adelaide Advertiser articles and a video interviewing Rachel Vaughan ("[My Father Was Australia's Epstein](#)" - [Rachel Vaughan - Part 1](#)). The Research Group’s findings will be publicly available, as will their recommendations, some of which may result in criminal proceedings noting, as an example, then-Senator Bill Heffernan stated, “*a judge said from the bench ‘sex with siblings should now be legal’*”. Also, David Robert Steel [28 High Profile Pedophiles](#)

[AU 🇺🇸 🇦🇺](#). The whole appalling issue is worldwide and being exposed rapidly, as this program on Australia's 60-Minutes reveals: [60 Minutes Australia: Pedophiles All Over The World: Spies Lords And Predators!](#). Another video presentation concerning widespread paedophilia and much worse in Australia: <https://rumble.com/v30gmyw-jeanette-archers-international-sra-conference-rachel-vaughan-presentation.html>. Such exposures alone could destroy the Australian governments and judicial system.

All forms of crime, past and present, will be fully investigated and optimum solutions applied as part of a new high-level group's responsibilities to minimise all forms of crime in Australia. This will include the highly questionable 1996 Port Arthur massacre where the evidence did not match the official story ([Australia's Port Arthur Massacre - Exposing A 30 Year Coverup - Paul Moder](#)), the non-open trial, files classified for 75 years and overseas direction about gun laws.

The Australian Security Intelligence Organisation (ASIO) is the national security and intelligence agency of the Australian Government. Its primary role is stated as being to protect Australia and its citizens from threats such as espionage, sabotage, foreign interference, and terrorism. ASIO operates under the Australian Security Intelligence Organisation Act 1979. However, ASIO's performance has been highly criticized over recent years and government plans to extend its powers and levels of secrecy are unacceptable. ASIO's role will be investigated to compliance with the new governance, likely resulting in major changes.

Crime of all sorts has increased recently to a totally unacceptable level. Crime minimisation will be a key focus for the new government. Clearly current and recent efforts have been mostly dismal failures. A new set of directives to deal with criminals will focus on reversing behaviours known to lead to future crime such as bad parenting, behaviour correction after the first crime is committed, minimising jail to avoid criminal mixing with other criminals, primary focus on helping victims including restitution, more use of electronic tracking devices and applying best successful practices learnt from other countries.

7. **Elections will be by paper voting forms only with rigorous oversight:** Oversight of the election process, possibly by the local police, will continue until the election controllers have demonstrated they will conduct transparent and fair elections (which they don't at present). It is vital to realise that elections are corrupted in most Western countries in favour of the establishment's preferred party and candidate. The following video describes the corrupt process and results typical in the UK, but it would be naive to think similar corruption does not happen in Australia - [🇺🇸 BRITISH CIVIL WAR COMING AS ANDREW BRIDGEN EXPOSES DEEP STATE PLOT TO BAN ELECTIONS & KILL RIVALS](#); numerous cases have been reported to the Australian Electoral Commission and usually ignored. The AEC's so-called "*Font Size Case*" (*Australian Electoral Commission v Kelly* [2023] FCA 854), which was nothing short of a taxpayer-funded hit job. The judge did not mince words, noting the AEC's conduct towards Kelly was "unjustifiable and unreasonable". The Commonwealth of Australia Constitution Act – section 8 states that voters must only cast one vote, therefore the current compulsory preferential system is not lawful. The pre-poll period should be no more than 3 days, and the compulsory preferential system and compulsory voting will be removed: it is unfair, repressive and dishonest and cannot be described as democratic by any means; it

entrenches the two major parties and eliminates most independent voices from parliament. There are pros and cons regarding compulsory voting, including for referenda; this will be reviewed. All election rolls will be fully reviewed for accuracy. As much as possible factual information will be provided to everyone before the next election; democracy requires not only accurate elections, but well-informed voters not suffering from cognitive dissonance, as noted above for direct democracy. Currently, most voters are overly influenced by false information from many members of parliament and the senate, and even more so by misinformation from the mainstream media. The new government will consider whether future candidates for parliament and the Senate should all be qualified in their understanding of a range of information required to form balanced assessments on issues relevant to governing Australia. The new government will also consider whether the current 3-year term is suited to optimum government.

Members are elected based on promises made to voters. Currently there is no mechanism to remove elected members that break their promises. The new government will introduce a practical process that can force a member to resign if they break one or more significant promises.

A separate but allied issue concerns lobbying where a body or individual attempts to influence members of the government, often covertly. This form of lobbying will be banned.

- 8. The government will manage Australian financial affairs:** The overriding problem for Australia and much of the rest of the non-Islamic world is that money matters and dealings have become their largest industry, trading various forms of money, which is more like gambling, totally unproductive and often very damaging to genuinely necessary and productive industries and companies. Financial controls in most of the world are staggering complex and few, if any, fully understand them all.

Widespread usury banking and related financial controls were started and continue to be led by Jewish bankers, in particular the Rothschild families. Recall Jesus expelling the money lenders from the Temple, known as the Cleansing of the Temple. This video by Ray Dalio, a very knowledgeable billionaire, explains the background and how the world, including Australia, arrived at the present impasse; the rise and fall of empires and the drivers of power: <https://youtu.be/xguam0TKMw8> . Note: the video was produced 3 years ago and his projections are accelerating now. The official story of how the Rothschild's massive world-wide banking empire grew so rapidly does not make logical sense. A more likely scenario is described in this video: [The Tartarian Banking Systems — Taken Over By The Rothschild Bloodline \(Video\) | Banksters | Before It's News](#).

This next video about ancient Guilds and their destruction by banks is worth listening to and thinking about: https://youtu.be/kXrXNozRh_I . As noted again in Section 17, and explained in this video why the Rothschild bankers saw guilds as a threat to their banking usuary system [An Empire WITHOUT MONEY — Why the ROTHSCHILDS ERASED Tartaria. The 1863 DOCUMENT](#). This video describes the system of transaction processing and dispersed 'banking' based on trust across vast regions where services were charged for and no interest, or usury, existed: [The Tartarian Banking Systems — Taken Over By The Central Bank Network](#).

Iran currently operates the world's only fully interest-free money and banking system (riba-free). The Research Group will identify all countries that do not apply some form of usury and assess their levels of success as well as any significant failings, then recommend how the identified benefits could be applied to Australia's financial system.

Money was initially introduced some three millennia ago as a simpler method of trading, replacing the traditional barter to enable transactions between two or more parties that want to exchange goods and/or services. No more, no less. This is the principal that the new Australian government will adopt, albeit of necessity, gradually and within far more complex digital systems. All current debts, or types of debts, both government, corporation and individual, will be assessed for their validity. It is likely that some debts do not align with the new government directives, governance procedures and legality; some of this debt may have no validity so may be deleted.

The government and councils will reduce their debts as fast as practical in line with other objectives such as growth; the aim will be to have no government or council debt unless it is productive.

All transactions used by the financial traders will be assessed in terms of their contribution to the real economy rather than, for instance effectively gambling such as naked shorts that will be banned. Most other countries' financial controllers will object vehemently, and do their best to prevent such commonsense eventuating, likely including major threats and worse. This is now a massive world-wide problem and in the process of total collapse and a reset, as has been planned for several decades. Much of this world-wide financial horror story is explained in this video, including the 'missing' USD21+tn: ['They've Given Up on the Country': Inside the Financial Coup | Catherine Austin Fitts](#). The whole financial system is now little more than gambling using someone else's money as well as using the financial system to control the world; the US planned control grid is pure evil, Satanic. The main question now is, will the world's financial system shift to a sound system that favours the general public, or a system controlled by bankers and the New World Order / World Economic Forum?

The new Australian government has the opportunity to change Australia back to money being solely a means of facilitating trade, growth and family lives, rather than being usurped by private bankers and allies that make colossal profits from a wide range of financial shenanigans as well as creating 'money' by adjusting a figure in a computer. For instance, derivatives have been described as a weapon of financial destruction. Australia will not be involved in any way in crypto stablecoins, programmable money, traded securities or any related financial systems, and those people advocating such involvement will be removed from control of the Australian financial system.

The new Australian government will take over ownership and control of the Reserve Bank of Australia and disallow ownership of any major Australian bank by foreign interests. Australia should minimise its involvement with all overseas banks and financial organisations until a new credible financial system has been fully implemented and proven. For instance, when one of the largest banks in the world, JP Morgan Chase's CEO, Jamie Dimon, and other directors' close involvement with, and financing of, Jeffrey Epstein's activities has been fully revealed, many major banks are likely to fail.

Australian banks wishing to participate in trading money and related instruments such as derivatives (called 'financial weapons of mass destruction' valued at over a quadrillion

dollars) will be required to do this through companies fully separate from their customer banking services companies.

Control of Australian financial organisations by overseas organisations will cease, in particular control by the Rothschilds empire. A central finance department will oversee all aspects of Australia's finance, currency, budgets and financial relationships with other countries. This department will likely oversee Australia's shift from fiat currency to gold and asset backed currency, together with adoption and management of transaction systems such as Ripple/XRP, part of a global operation.

In recent months there have been dramatic changes in the gold and silver industries. Gold, as noted above is most likely to be the major asset backing the new non-fiat currencies worldwide. Silver is entirely different because it is used in almost every process involving electrical components. There has been a growing worldwide shortage of silver in the last 5 years, and it is not possible for any significant increase in production for about another 5 years. Therefore, some combination of government intervention and market price mechanisms will be applied within a few months. The new Australian governments is most likely to need to take direct management of both gold and silver, albeit for different reasons, including banning any export of gold and silver, including ore, for a period.

Banks will no longer be allowed to create 'money' they lend as mortgages, then charge interest on this imaginary 'money' – see [!\[\]\(7283d9faf9c88ace5d8a560ea0213e53_img.jpg\) !\[\]\(e9c12ce0b9fe3d2506ded7bc00fdf9bd_img.jpg\) !\[\]\(e50ed6b6e349e10ed5dbcce33245c246_img.jpg\) !\[\]\(72cff39b4b06da1bbb2b28d4fa3beb7b_img.jpg\) 100 The Australian mortgage scam explained](#). Only the Australian Government can and will create money, always based on asset backing, and will not charge interest on the money that is lent to people and organisations that are deemed able to repay the loan over a period of time. This video concerning the Australian Constitution and money (repeated from section 7) should be listened to carefully from the 17th to the 52nd minute. It explains how 'money' will be governed in future: [TIME TO CONFRONT THE PHARAOHS, IN COURTS, WITH JURIES](#). The video explains how far the government and legal system have strayed from what was clearly laid down in the 1901 Australian Constitution, and how interest, or usury, will be banned in Australia.

Laws will be passed to ensure cash must be accepted as payment in any transaction. Powerful opposition and threats from the Western banking empire will be met by transparent discussion including on cui bono, who stands to gain. Several countries avoid interest, or usury (recall Jesus drove merchants and money changers out of the Jerusalem Temple, overturning their tables and chairs, accusing them of turning a house of prayer into a "den of robbers"), in part, but none have the necessary supporting structure, and international transactions are problematic. The proposed new governance could enable a pilot to be tested, possibly by willing councils and corporations.

- 9. Infrastructure will be majority owned by Australians:** Fair compensation will be paid to all current overseas owners of infrastructure. Such infrastructure assets could be owned by public asset trusts. Most infrastructure will be majority owned and managed by Councils. Ownership will be no less than 51% Australian, with overseas ownership in some form of joint venture, including rules for technology transfer.
- 10. All taxes will be replaced by a single GST on non-essential items:** Australians pay 125 different taxes, levies and charges each year; most are small and many overlap. The total is huge. This proposal will have the new government eliminate all current taxes and

replace them with a single GST at 15% or thereabouts on all new non-essential products. The exact figure will depend on government and council budget requirements. An import tax, or tariff, will be applied to all products and services - probably about 10%, again depending on budget and trading requirements. This import duty will be adjusted so that imported services will be subject to tax. This will include situations where companies replace local labour and services with overseas labour and services, typically from India and the Philippines. Taxes on subsidized imports will be higher to offset the effect of subsidies. Imports will include services that have been outsourced to labour from overseas countries, often because overseas labour is lower cost than labour costs in Australia.

The currently world-dominating vehicle Chinese company BYD had massive state subsidies that was a major factor in their rise to dominance in their industry. The new government will apply an import tariff that will offset this subsidy for all BYD products sold in Australia. These tariffs are expected to provide a significant proportion of Australia's overall income and will be collected by a central department in conjunction with councils.

All minerals and fossils fuels such as gas that are extracted from the earth, including offshore, and are extracted will pay a significant royalty, or PRRT equivalent, which is a form of tax, the amount to be determined based on international rates such as Norway and Russia charge. Local shortfalls will not be allowed if exports exist. This video explains how currently Australia brings in more tax on beer than on exported gas (HECS): [WARNING: Australia's Oil Crisis Is Far Worse Than Expected \(\\$50 Billion Wiped Out Overnight\)](#) . Australia has ample potential oil and gas deep underground to have developed a massive sovereign wealth fund similar to Norway's since discovering oil and gas in the 1960s and accumulating a fund now worth about USD1.8 trillion. Some calculations show Australia has forgone at least AUD70 billions by selling LNG to Asian countries at scarcely more than extraction costs.

This massive tax simplification of all business and government accounting will enable double-entry bookkeeping to be replaced by simple computer-based transaction accounting, needing minimal staff and at a small fraction of previous costs. As well, the basis of accrual accounting will need to be replaced. ***All domestic tax returns will cease – no person or company will ever have to complete a tax return again. The massive amount of totally unproductive effort involved will cease; and all this unproductive effort will be redirected towards productive outcomes.*** Change to the 13-month Julian calendar with all its advantages will be assessed for its practicality.

Overseas corporations will be taxed on transferred funds. Overseas corporations, Australian corporations with majority overseas ownership and corporations with operations in Australia will pay taxes on funds transferred overseas. The amount of tax will be based on a new set of rules to be determined. There will be no tax-free status for corporations with partial or total overseas ownership. The current manipulation of prices that allows overseas corporations to shift excess funds back to their head offices will be prevented. Iconic Australian brands that are now owned by overseas corporations will be encouraged to be brought back to Australian ownership through taxes on fund transfer arrangements (Holden, Four'nTwenty Pies, Victa Mowers, Cochlea, Akubra, Vegemite etc.).

11. Electricity will be provided at the lowest practical cost: The net-zero energy plan has been variously costed at over \$1tn; even these massive figures leave out major significant costs such as the losses sustained by companies and corporations due to excessive costs and lower reliability. The net-zero plan and all related aspects including subsidies will cease immediately.

The Issues item 3. notes the despicable lies told by Prime Minister Albanese and Minister Bowen about this: <https://youtu.be/7wnofyxrT6U> . The net-zero plan is based on ideology, directives from the UN IPCC, false green demands and legislation, profit motives and often direct lies.

The new government's objective will be to provide the lowest cost electricity at the highest practical level of reliability, initially based on the fact that Australia is the largest exporter of coal in the world, is the second largest exporter of natural gas in the world and has 30% of the world's uranium. Achieving this objective currently requires functioning Australian coal and gas-powered generators, all of which have equipment installed to ensure clean exhaust, and some hydro generation, and possibly some modern micro nuclear power plants. It may be economic to re-open some coal power stations that have been closed for spurious reasons. Solar and wind generation very rarely matches the objective, and the green, sustainable energy proposals in Austria and much of the world are failing dismally, as described in this video: <https://youtu.be/gaCf6GCYykg> .

A national power department will oversee all current and future generation short and long-term planning, and work with councils to ensure their objectives are achieved. One current

China has been castigated for extreme pollution, mostly relating to energy. However, there is ample evidence this has been exaggerated and that China is now taking a balanced approach to renewable and so-called fossil fuel energy - [Iran war demonstrates why China is dominant global energy player](#).

For over 100 years numerous inventors such as Nichola Tesla have demonstrated how energy can be extracted from the ether and other sources such as magnetic energy used in the 1800s until this practice was stopped. This video explains how commercial interests and false 'science' prevented development and use of free energy: [They Powered Factories in the 1800s Using Earth's Magnetism — Then Forgot How](#). Another video explains how numerous inventors and inventions have been removed for more than a century: [Epstein Files Reveal Elite are Murdering Free Energy Scientists to Keep Humanity Enslaved? \(Video\) | Alternative | Before It's News](#) . Some of these technologies were known and used for hundreds of years, possibly millennia, in the Tartarian era and likely well before such as atmospheric energy (see [The Forgotten Empire That Created Free Energy Cities — And Why They Destroyed It](#) , <https://youtu.be/aafvlX1YyVs> and [The Last Tartarian Died in 1952 — The Secret About Tartaria He Left Behind](#)). Note in particular comments from 20th minute in the first video by Nebraska Senator George Norris that these past free energy systems built before 1900 were abandoned because 'they did not make money', which as why banker JP Morgan stopped funding Nichola Tesla because he would not be able to charge for power delivery of free electricity from the aether as this would have prevented the energy monopolistic suppliers from creating huge profits, as still is the case today: [BEYOND BLUE BEAM — SUNDAY TRANSMISSION #001 – Weekly Geo-Political News and Analysis](#) .

In recent decades the practice of producing so-call ‘free energy’ has been commandeered and kept secret by a few huge corporations. Inventors who build devices to produce ‘free energy’ have been systematically stopped by powerful forces, including by murder and being ‘suicided’. Meanwhile, the power industry has mainly used so-called fossil fuels, coal, oil (which is actually abiotic produced very deep underground by a natural process similar to the Fischer–Tropsch process, developed in Germany during WWII), gas and nuclear power, to produce heat and steam that then powers turbines - [Fossil fuel for fools, oil is an inorganic renewable resource - petersenior42@gmail.com - Gmail](#). The whole ‘fossil fuel’ scam was invented by the Rockefellers and Smithsonian in the late 1800s to create artificial scarcity and jack up prices and enable control by selected elite. Oil being abiotic is had led to oil well drilled in the 1970s filling up again after excessive take-offs.

The new Australian government will have a section to develop optimum forms of ‘free energy’ for public release and use, both in Australia and the rest of the world, including variations on zero-point energy, Nikola Tesla’s devices, Paul Bauman’s Methernitha device, hydrinos in Suncells (see Brilliant Light Power), Tartarian worldwide power grids (see video above), scalar wave electro-magnetic zero point energy, the NZ OpenStar fusion project, the numerous demonstrations of water / hydrogen powered vehicles and earth batteries (see <https://youtu.be/W4wTv2aOeQc>). The section’s findings will all be open source. **This section will be protected by the Australian military and or police to ensure it is not stopped or sabotaged by outside forces.** This may be the start of the world switching to free energy, or a form of zeropoint energy as it is usually called – Dr Steven Greer explains: ["Hundreds Of Trillions" - Steven Greer Reveals How Zero Point Energy Could Disrupt Major Industries](#). When this happens, it will transform most aspects of life across the world; not just transport (See Col. Tom Beardon (1930-2022), Free Energy, www.better-management.org).

- 12. Compulsory audits of government and council efficiency and effectiveness.** The new government structure will be far simpler than present, focused on achieving widely accepted objectives that do not include ideology. Most, if not all, these departments will be set up from scratch, as noted in the introduction, then the replaced department will cease.

All staff of the new departments will be selected based on capability, past performance and, most importantly, their understanding of, and support for, the new governance approaches. These staff will not be permitted to overrule or ignore directions from elected members of government or councils, as explained by previous UK Prime minister, Liz Truss [Liz Truss: These people REALLY run the UK | Daily Expresso](#).

Every government department and council will be required to have an annual financial and operational audit to assess their efficiency, effectiveness and degree to which the organisation supports and aligns with the Australian vision and values. The results will be published. All government employees will be accountable for their performance assessed using a standard performance measuring system that will be developed as a guideline. Councils will use standard performance assessments to ensure staff accountability.

Given the very poor record of government and councils in project management, the audits will require assessment of both project management and the capabilities of all project managers.

Another critical role of the new government will be oversight of existing monopolies, including applying a range of measures that will strongly discourage the formation of new monopolies. This will include all areas of commerce such as agriculture, retail and mining, and natural monopolies such as power distribution and large retailers. Another major monopoly in Australia is the mainstream media, including by the Murdoch group. The new government will apply major actions that will discourage media monopolies and return to mostly media owned by Australians. These actions will be in conjunction with investigations by the Research Group to differentiate between credible information and propaganda.

As well as overseeing monopolies and monopolistic behaviour and business models, alternative business models that favour customers will be assessed and the results widely publicised such as Costco in the US [The \\$350B Costco Empire: The Only Family WALL STREET Can't Touch....](#). Jeremy Clarkson's local beer brewery [Inside Jeremy Clarkson's Multi-Million Pound Brewery Empire](#) provides very important messages about business, marketing, quality and entrepreneurialism consistent with the proposed vision for Australia, and how small-scale, locality, community connection and quality is inspirational (831) [How Clarkson's £75M Brewery OUTSMARTED The Entire Industry – They Never Saw It Coming! - YouTube.](#)

The government will proposed audit methods that include not just efficiency and effectiveness, but the degree to which they support and align with Australia's Vision and Values. Specific questions will be developed.

There is considerable debate as to whether businesses and other organisations focus more on modern corporate approaches or socialist/Marxist approaches. Bother approaches have deviated towards extremes in recent years. Neither is desirable in terms of optimum benefit to all relevant stakeholders. Future audits will include assessment as to how will the business or organisation supports and aligns with Australia's Vision and Values.

Artificial intelligence (AI) is becoming increasingly common in most aspects of life, in particular industry, commerce and a wide range of services. AI is increasingly reducing or replacing the need for human effort, but there are major dangers, including those described by Larry Fink, CEO of the largest asset corporation in the world, about the collapse of capitalism as AI, much of it Chinese AI, takes over many white collar and other jobs, and endangers the basis of the elite's world: <https://youtu.be/EV0bdyrCiws>. Students' reliance on artificial intelligence for schoolwork has eroded their computing and digital skills to the lowest level in 20 years of official testing. This warning notes that mass AI job replacement leads directly to consumer debt defaults, reduced spending, and a dangerous downward deflationary spiral: The people who lose their jobs stop being customers.

One wise commenter noted, after Dorsey announced it would make 40%, 4,000 of its workforce redundant, replacing them with AI: *The path forward requires a conscious decoupling from the systems designed to make you obsolete and dependent. Invest in skills that robots cannot easily replicate -- skilled trades, organic gardening, natural medicine.* ^[12] *Use AI not as a master, but as a personal tool for learning and creation, bypassing gatekeepers to build your own knowledge and security. The era of trusting centralized institutions -- be they corporate, governmental, or medical -- is over. The only trustworthy investment is in your own health, knowledge, and community. As the AI purge accelerates, your freedom and abundance will depend not on a pay check from Jack*

Dorsey, but on your commitment to decentralization, truth, and self-reliance. Whatever happened to the skilled trades men and women? This video explains the sad – and how A deliberate – loss [This Is Why Australia Stopped Training Fitters and Turners](#) , and how Australia is the loser as it forfeits its independence, and more university-trained scholars are replaced by AI. This needs a fundamental rethink and switch to a more sustainable future for Australians.

A government department will provide guidelines for all government and council audits, and advice on how Australia should take advantage of AI and avoid the serious dangers. These dangers include many aspects relating to the rapidly increasing number and size of data centres around the world, including Australia. Data centres require massive amounts of power and water. In several recent cases, local populations are being denied water and power in favour of the very politically-powerful data centre owners. It is not possible for these data centres to be fully secure as they are all connected, so are ‘hackable’, as this video explains, including the situation in Iran where President Trump has clearly lost the war on 16 May 2026: [Iran ATTACKS Ships in Hormuz, China's Surprise STUNS Trump | Greg Stoker & Elina Xenophontos](#) . AI is facts, trends, analysis, calculation, but it is not emotion and feelings, it is not human – watch this video to understand the difference: <https://youtu.be/qAZ0E91jpZ8> , but it does emulate human qualities which is very dangerous. This will include advice on dealing with a greatly reduced need for people to work long hours or at all, and how to shift towards more time on enjoyable and productive pastimes. The first part of this video explains how serious this rapidly-growing problem is: [Brighteon Broadcast News, Oct 29, 2025 - Amazon Fires 30,000 as Mass AI Replacement of Humans Begins - Brighteon.com](#)

- 13. Regulations and licences will be reviewed for compliance with governance:** All current regulations, permits and licences will be reviewed for their need within the new government approaches and vision as well as the concept of ‘ownership’. It is expected that the majority will be either simplified or not necessary, so stopped.

For those regulations that are retained, they will all be reviewed to ensure optimum efficiency and effectiveness, including contributing towards lowest cost. It is noted, for instance, that numerous builders point out that excessive regulations lead to at least 40% increase in building costs completion time. Many regulations are basically a means of control, restrictions and taxing by authorities, as described in this video [The Real Reason They Invented "Building Permits" Taxation is theft-you don't really own your land](#). The great majority of regulations could be replaced by application of normal common law procedures when necessary.

New building methods such as practised in China will be assessed to practical application in Australia such as this video describes: [China Is Printing Entire Buildings Like Lego — Then Stacking Them In Just 28 Hours](#). Pre-assembly of almost all building components in a specialist factory enable a 26-story building to completed in 5 days, about 5% of the time it takes to build one typical Australian house. Engineered to last 1,000 years and survive a category 9 earthquake, almost all material is recyclable and at least 20 times the typical duration of an Australian building. Other buildings in China a produced by specialist printers that follow a digital design where any detail can be changed in the computer program, with building completed in hours, not months.

Automation and precision is locked in. Not just China, but Singapore, Japan and the UK are testing similar new building technologies. Applying these or similar methods in Australia will require very different building regulations and thinking in Australia so, for instance, rapid building approaches where prefabricated units are built in specialist factories within agreed national standards are transported to the building site and assembled. This hospital built in Wuhan, China in 2020 in 10 days is one example [A UK Hospital Takes 10 Years to Build — China Assembled One in 10 Days Here's the Prefab System.](#)

As a separate but allied issue, too many major worker unions have been proven to be corrupt, with their leaders taking part on both corrupt and overly-disruptive practices. Some make multi-million donations to the Labor party and appear to receive favours as a result. Some excessive union activity has happened for decades, including during the second world war. Some of their activities are overly coercive and result in excessive costs of major contracts. These practices will be examined and eliminated where necessary.

Regulations that currently result in long delays for new mines will be far simpler, transparent and completed very quickly, with many current regulations are expected to be removed. It is also expected there will be very few future regulations.

Many regulations could be replaced by re-introduction and extension of guild communities such as formed the basis of many professions in the Middle Ages. The removal and destruction of the ancient guilds and their successes is described fully in this video. The guild approach to living within the guild system without money but providing everything a tradesman and his family needs will be assessed and the results publicised, including who destroyed this system, and how; unsurprisingly, ruination by bankers again as part of the tax and debt slavery system.

- 14. Immigration will be aligned with planned growth:** The starting point for Australia's immigration policy and practices must be to define what Australians want Australia to be in the future. Do we want Australia to be like most of Europe and the US where excessive immigration has resulted in a divisive hodge podge of bellicose complainers regularly attacking each other? Or do we want to return to the attitudes and values of the 50s and 60s where almost all people were contented, worked hard and loved their country (with a few exceptions...)?

Australia's immigration policy in future will be to allow only those who will support and love Australia and its vision and culture to live here.

Past attempts by organisations such as the WEF, UN, WEF, Marxists and the like to ruin Australia and its culture and lifestyle will be prevented. Immigration numbers will be immediately reduced to a level that is sustainable, based on Australia's growth plans and economy. By 1966, the Liberal government dismantled the White Australia Policy. Within two decades, a radical transformation of the nation's identity was underway — with ordinary Australians given no voice in the decision. One small organisation dared to resist: Australian National Action (ANA). For simply defending traditional Australian values and the right to national self-determination, they became the prime target of a ruthless campaign by the government and its notorious political police — the NSW Special Branch. Orders came from the highest levels: shut them down at all costs.

All immigrants will have to demonstrate they will be self-sustaining and not require any subsidies for at least 5 years, except in emergencies. The five years will be viewed as a

probationary period; any immigrant convicted of a crime or failing to assimilate into Australian society during this 5-year period will be refused citizenship and returned immediately to their country of origin or possibly another country of their choice. As well, they will have to swear allegiance to Australia and the new Australian Vision. Further, immigrants will be expected to integrate into the rest of Australian society rather than gathering in ghettos as often happens with Muslims, Indians, Africans and Chinese. Specific actions will be taken to discourage formation of such ghettos and to diffuse current ghettos if, and only 'if', these ghettos show signs of opposing Australian values, as is happening in some largely Muslim ghettos where people block streets for prayers and try to implement Sharia Law. This video explains and supports the points above, 'Labor STUNNED as Pauline Hanson WRECKS and EXPOSED them by introducing Imam Tawhidi on immigration': [Labor STUNNED as Pauline Hanson WRECKS and EXPOSED them by introducing Imam Tawhidi on immigration](#)

Public communications by any immigrant inconsistent with Australian law and vision such as advocating Sharia Law will be assessed and may result in immediate expulsion. This will include openly advocating application of certain texts from non-Christian religious books and documents such as the Koran that are inconsistent with Australian law and vision. Note: the issue concerns behaviour, not belief; it should be noted too that parts of Australian cities already allow Sharia law, as the next video explains, and the following video about Sharia realities in Texas, USA. Such actions as the policeman describes will be prevented and illegal under the new government: [US reporter told by top NSW cop not to go into Islamic-controlled Lakemba - cairnsnews.org](#). This video poses the question what Sharia law already exists in Australia, given the widespread Sharia and Muslim communities in the US: [America SPEECHLESS After Witness Reveals Sharia Courts Order Killings In US 1](#). The recent rejection of foreign incursion in Japan represents a growing trend: https://youtu.be/pagQ_ZCPtVA. As Charlie Kirk said, 'immigration without assimilation is invasion'. Certain races allow and practice having child brides and underage sexual relations; this will be prevented. A related issue is that some influential people have proposed allowing sexual relations with underage children; this is illegal, will be denounced and may result in criminal charges, as will the people advocating such views.

- 15. Australia will have short- and long-term growth plans:** Australia needs a long-term plan for growth in all areas that contribute to Australia's economy, society and culture, including plans for immigration and national infrastructure. These plans will be developed in close cooperation with councils, bearing in mind it may not be necessary or desirable to have growth in some areas. However, it is important to note the 'growth' does not necessarily include growth in population - a normal assumption. Many people consider it would be better for Australia to maintain its current population, or even gradually reduce the population.

A key part of Australia's growth plans will include the requirement that an average family will be able to afford to buy a house and support the family with only one of the households earning an average wage.

Singapore Prime Minister Lee Kuan Yew described Australia's key problems outlined in this video [Why Australia's COLLAPSE Is Inevitable | Lee Kuan Yew's Warning to the Lucky Country \(ft. Housing\)](#). Australia was in danger of becoming 'fat and lazy'. Now

Australia is amongst the most unproductive countries in the world with a huge debt, both of which a worsening as successive governments pursue the wrong policies. It is critical that most of these policies be replaced with plans such as outlined in this report and Lee Kuan Yew's advice be taken.

One of the best and well-proven long-term plans is China's. Their planning system will be studied with a view to learning lessons for Australia's short and long-term planning. Australia's growth plans will be based on two key elements: Implementing Australia's vision, and optimising Australia's natural advantages and resources. Australia's size, climate and mineral resources will be important factors. However, growth plans from other countries will be assessed for full or partial adoption within Australia's growth plans. One example comes from China: [China Built a \\$1.2B Factory With No Lights, No Workers and No Breaks — It Runs 24 Hours](#). China as well as much of the far East, including North Korea, are falsely maligned by Western media and authorities, as explained in this video: [INTERVIEW: We dodged a bullet by millimetres](#).

A central department will assess and propose plans for Australia's long-term growth along the lines that China has done for decades, in conjunction with councils. Several countries have demonstrated successful growth strategies that Australia should learn as well as China including Japan from 1945 to 1985, and Germany from 1935 to 1945 (after Hitler dismissed the Rothschilds bankers from Germany, thus further antagonising the world-wide banking empire and sidelining the German elite). View this video about Germany and Hitler, with commentary by British pre-war Prime Minister, David Lloyd George: [They Lied to You About Hitler -- BIG TIME!](#)

However, there is far, far more to the complete history of the last two millennia, in particular the overriding role of the Jesuits, as described in this 109-page report, noting a few points appear to be inaccurate such as concerning Hiroshima and Mohammed, pages 21 and 22, a view that Western democracies are democratic and acceptance that viruses exists (they don't – there is not credible proof that a virus has ever existed) but the bulk of the report appears to be largely-accurate and very frightening compilation of historic and current events: [!!!!!!***Omega ****WWIII - petersenior42@gmail.com - Gmail](#). However, there is an alternative scenario in which the 'good' wins, beating the Satanic forces that have largely dominated for some two millennia. This scenario is expected to manifest itself over the next 12 months.

This next video that describes the proof that Auschwitz did not gas Jews to death, although at the end of the war Russian soldiers did in other camps [Instagram](#) . Another video describes how Jewish leaders, including bankers, organised and lead the Bolshevik rebellion and following control by Stalin, resulting in the death of an estimated 66 million Russians: <https://cdn.realaussienews.com.au/2026/05/The-real-holocaust.mp4> . A broader question is, is it the Roman Jesuits or the Jews that are leading much of the world? One answer is that it's both the Roman Jesuits at the top and then the Zionist Masonic Jews below them.

But how will growth be measured? The standard GDP measures focus on economics, ignoring all human value measures. A new set of 'growth' measures will be developed that focus on Australia's values. Other non-economic measures applied elsewhere in the world such as Bhutan's 'mindfulness' and 'gross national happiness' will be considered. Australia's growth will avoid the UNIDROIT and Lima Declarations in 1975 that were all about removing Australian production and shifting production offshore, removing

Australia's manufacturing base, sending production overseas and become dependent on global supply chains, lost self-reliance and diminished sovereignty.

About 90% of Australia's production capacity has been sent overseas since 1975. The great majority of mined products are exported overseas in unprocessed form; the new government will increase substantially export taxes on unprocessed mined products and encourage local processing of these products, as is currently happening in several African countries (some are banning export of unprocessed mined products). A similar approach will be expedited to encourage production of finished products rather than sell unprocessed material, including food. Several overseas corporations, including Japanese, have already expressed interest in setting up mineral processing facilities in Australia such as producing steel to be near the mines and potential future far lower cost of power and a wide range of resources.

All major Australian parties except OneNation have agreed to steps towards the New World Order / One World Government. This is described in this podcast: [THE FALL OF AUSTRALIA - by Nicola Charles](#). Now Agenda21 and Agenda30 make the situation worse. Australia and Australians have been screwed by its politicians and many large corporation leaders driven by the New World Order that includes numerous organisations such as the Committee of 300, the Club of Rome, the Fabian Society, the Freemasons level 33, Chatham House, Marxists and many more.

The new Australian government and councils will jointly oversee plans for improving and expanding national infrastructure and resources including inland water, sea, air, minerals (including rare earths) and vegetation. Incentives will be offered to maximise manufacture and services to be provided in Australia by Australian people and companies, and to replace imports. However, these incentives will only apply to services and products where Australia has a distinct advantage over other current and potential producers. For instance, car production is currently, and is likely to continue to be dominated by China where modern mass production utilizes new technologies as well as new integrated manufacturing systems, as explained in this video: <https://youtu.be/TW94swuBMBc>.

One area where growth is essential is birthrate; Australia's current birthrate is below the 2.1 required to sustain the population, typical of most Western countries. The governments will advise councils on potential ways to incentivise the growth of families although all the proposals for the government restructure and will have the effect of encouraging families to have more children that will grow up in a far better country than Australia is now.

Plans to implement so-called 'smart cities' will all be identified, publicised and eliminated.

16. Education will return to basics, fact and need-based information.

This will require the Research Group to identify and publicize that much accepted 'official' history and views are little more than deliberate propaganda to promulgate ideologies and plans for a New World Order. The group will also assess the basic needs of education, in particular in schools, universities and all educational establishments. The earlier influences and controls of education such as the book the Rockefellers used to rewrite history, H. G. Wells "The Outline of History", will be researched and the results be published, likely exposing gross and deliberate manipulation of education.

All levels of education will be reviewed, including Universities that have become more like corporations than higher learning establishments. An article in the Cairns Post on 25 June 2026 noted *‘Universities’ toxic workplace environment has been exposed in a damning new report that saw just one in 20 academics strongly endorse their profession to others. The report comes amid turmoil in the sector with job cuts, monumental wage theft cases and a government crackdown on university governance through the Australian Tertiary Education Commission (ATEC). The Perceptions of Academic Work in Australia preliminary report was released last Thursday and involved responses from 537 academics across 31 universities. Academics highlighted key concerns over workload pressures and burnout, job insecurity, limited career progression and some damning instances of bullying. One researcher said: “I have never experienced so much backstabbing like I have in academia”’.*

The proportion of students classified as having a disability has jumped from 19.9 per cent in 2019, the year before the lockdowns and school closures, to 27 per cent last year. Many aspects of living in the current and likely future world are and will be very different from past needs. Artificial Intelligence and specialist devices, including at a quantum level, are replacing the needs of many professions such as legal and medical. *(As a side note it may be that the understanding of things quantum, fields etc. is not possible within the constraints of fourth-dimensional mathematics and physics. It may be that understanding how the world works at a micro and macro level is far simpler than the massively complex explanations our scientists and mathematicians provide, but totally different, including interactions with forms of time and consciousness. See this video for a two-hour fourth-dimension explanation: [\(962\) Particles Are Not Tiny Objects... So What Are They? - YouTube](#)).* Trade professionals are becoming scarce, often requiring immigrants because of lack of apprenticeships and glamourising of university qualifications. The Research Group will assess the current directions of all educational establishments to contribute to Australia’s vision and compare these to the forecast needs in future, and recommend a program for changes that will be available to all these establishments, councils, companies and professional establishments.

Much re-writing of accurate history started around 1900, including wars, finance, medicine, science, deleting much of history such as Tartaria (see <https://youtu.be/78EASYpsDGI> , [They Lied About When These Buildings Were Actually Built](https://cdn.realaussienews.com.au/2026/06/Tartaria-2.mp4)), and <https://cdn.realaussienews.com.au/2026/06/Tartaria-2.mp4>, the second video referring to old majestic buildings in Sydney and Melbourne, and false descriptions of WWII – this video explains some of the realities of WWII; completely different from the ‘official’ Ministry of Truth narrative: [Rise & Fall of the NWO / Episode 25: 1941-1944 \(World War II, Part 3\)](#) . Other information kept hidden by secret parts of government will no doubt be revealed soon such as aspects of free energy (see Section 18) and the Antarctic, as described in this video: <https://youtu.be/xBcJgEs7Xqk> .

Dissemination will need to be done gradually and very carefully to avoid shocking people too much.

All 'woke' issues will cease such as gender issues; men and women will be defined by biology and birth. In particular, all woke, ideological, gender, critical and systemic race theory and like topics currently taught to children in many schools will be forbidden. This video explains the deceptive growth of the word: [Where DEI Actually Came From | James](#)

[Lindsay at NZ Parliament with the Free Speech Union](#). For instance, In Australia, the Human Rights Commission is working to give pregnancy protections in law to men who claim to be woman [Australia Has Completely Lost Its Mind - They Better Fix This Fast](#) .

Some ‘science’ as taught and presented is false; falsities will be identified and replaced by correct information. For instance, acoustic levitation has been demonstrated in several modern establishments as well as described in credible texts going back many millennia. It appears that the correct frequency, likely 110 Hz, and specific amplitudes can levitate objects, as described in this video [The Sumerian Tablet That Describes Sounds That Move Stone — And the Frequency They Used](#). But the scientific establishment will neither accept nor investigate this. Given such capability would be exceptionally useful in many situations, the Research Group will investigate the subject and publish their findings. The group will also investigate and publish details of any attempts to stifle their research.

- 17. Impediments to freedom of speech will be removed:** Complete freedom of speech will be legislated, with only the prevention of speech and writing that is likely to cause a crime to be committed. As Senator Roberts said in a Senate speech, ‘Everyday Australians now risks being criminalised for expressing unpopular political, cultural, or religious opinions.’ There will be no e-Safety Commissioner, an unelected bureaucrat driving the prevention of freedom of speech and collation of related documents for the Labor government. George Christensen said ‘They’ve got more than 10,000 documents on me.’.

This video interview by Tucker Carlson with Kim Dotcom explains much about how freedom is controlled by government as well as non-government bodies: [World-Renowned Hacker Issues Dark Warning on Surveillance, AI, Propaganda, & Trump’s Agenda](#) . Any person or organisation, including from any government, who knowingly allows a so-called ‘back-door’ into a computer program or application, that is, a way to remove or see private information, will face severe penalties. This will include executives of such a company.

Supposedly racial terms such as Islamophobia and antisemitism (a totally misunderstood term) will not be censored. It is widely accepted that some information is ‘highly classified’ and should be censored for national security; this will be reviewed in terms of: Who does the censoring, what does ‘national security’ and ‘highly classified’ mean and whose interests are being protected? Censorship is really a way to control people’s perceptions, and therefore behaviour, so is very dangerous both conceptually and in practise. Surveillance using technology such as facial recognition and electronic devices, including smart phones and computers, will be banned. This 112-minutes video should be essential viewing for everyone: www.youtube.com/watch?v=ZFHHOBiUrkg.

- 18. All Australian people will be treated as equals:** All people in Australia will be considered equal in term of regulations and laws. The changes over many years to have regulations and laws that discriminate for or against any race will be fully reviewed and changed or abandoned if necessary.

Australia will have only one national flag.

All legislation that favours or discriminates for or against any race will be removed. The Research Group will identify false views and legislation that either favour or discriminate against a specific race. This will apply, in particular, to Jews and some Jewish groups such as the Lowy Institute, Aboriginals and Muslims. It is vital to recognise that much

misinformation is propagated about most races and religions, although every race and religion has extremists and are used covertly at times as variations on false flags, in particular antisemitism. Actions rather than views and beliefs must be the concern governments; as US President Jefferson *“religion is a matter which lies solely between man and his God, that he owes account to none other for his faith or his worship, that the legislative powers of government reach actions only, and not opinions.”* Most religious and other groups comprise the majority of fine people but with a small minority of the members, or apparent members, using the groups for other nefarious purposed. It is not well known that Muslims and Christians share many beliefs such as about Jesus and Mary, as explained in second half of this Tucker Carlson interview: <https://youtu.be/rFgLe03bVnA>.

The group will also confirm that so-called ‘original’ Aboriginals were descendants from several races rather than just the supposed one, including the Negrito, the Murraysians and the Carpentarians, back to the time when Australian land was connected to lands further north. DNA testing proved pre-Dravidian Indians came from India about 4,230 years ago, they were not the ‘first’ people. Other evidence suggests much earlier civilisations with advanced knowledge. Examples include Denisovans: [DNA From Aboriginal Australians Finally Reveals Ancient Human Species No One Else Has](#) and numerous examples of human visitors and constructions several millennia ago: [12 Ancient Structures in Australia No One Can Explain](#). There are also Pyramids deep in the Blue Mountains that are off limits, also pyramids in Tasmania. There is also evidence that early Phoenicians and ancient Hindu mariners visited Australia. Much early history of Australia includes connections with ancient Egypt, as described in this video [Australia Was Egypt - Egypt Was Australia - Evan & Steven Strong](#). Many examples of previous civilizations and their efforts have been documented in the Northern Territory as described in this video, some dated up to 28,000 years old: <https://youtu.be/qQtt44gc5ms>. Several of these examples have been either deliberately removed or banned from any visitors by authorities for unknown reasons – yet another deliberate cover-up by government directive. For what reason, and who created these directives, or, more accurately, these lies?

Some is a matter of law and to some extent culture, although the cultural aspect has been grossly distorted by people with covert agendas. Access and further investigation will be authorised by the new government and the banning authorities required to explain their reasons for the bans and who directed their actions and why. All laws and interpretations relating to Australian Aboriginals will be reviewed in terms of the accuracy and compliance with the new Australian governance, as will modern interpretation of supposedly Aboriginal culture such as Ernie Dingo’s Welcome to Country in 1976, originally as a fun-theatre act. The role of Ambassador for First Nations People will be abolished. Full compulsory audits will be carried out of government expenditure on Aboriginal services and projects, in particular where the Aboriginal common people received little or no benefit from the expenditure, and the degree to which the people and organisations involved support and align with the Australian vision and values.

- 19. Plans for digital ID will be put on hold:** The current plans to introduce digital ID will be abandoned together with full explanations of the immense dangers of digital ID. The explanations will include the experiences of digital ID in India -

<https://cdn.realaussienews.com.au/2025/12/A-serious-red-flag-2-2.mp4> . It is likely that the new government will authorise national ID systems sometime in the future if and when privacy and security issues have been fully resolved.

All surveillance technology and applications such as Palantir's Department of Defence's contract, information technology, AI warfare and wireless communications, will be reviewed and stopped if they do not comply with the new Australian governance and vision, and does not have comprehensive, credible and monitored safety standards as well as the means for anyone to check all information stored concerning themselves. This will apply to 5G and 6G transmission where there are highly dubious standards as described in this video [The Truth About 6G Is Coming Out and It's More Devastating Than 5G Ever Was \(Video\) | Alternative | Before It's News](#).

The Australian government's relationships with Palantir and other IT companies will be investigated for support and compliance with the new Australian governance requirements, including his involvement with Epstein. This will include the growing major investment in Palantir by the Future Fund and Palantir CEO Peter Thiel's involvement with Epstein, IDF/Israeli activities and the Lavender AI system. Thiel said democracy and freedom are incompatible. For instance, Ultra-Zionist Thiel and Palantir contracted with Israel to identify targets in Gaza and Iran for assassination and bombing, as described in these videos: [The World Is Turning On Trump and Israel | Max Blumenthal](#) and [Palantir's Technological Republic is a blueprint for digital tyranny — RT World News](#). The NZ Herald reported on 25 June 2026 *'Tech billionaire and New Zealand citizen Peter Thiel's secret society has been brought into public view after a hacker exposed the group's internal records. Thiel and investor Auren Hoffman co-founded the organisation, known as Dialog, in 2006, which hosts off-the-record retreats for high-profile figures to gather. Dialog operates as a private, invitation-only forum described as "bipartisan", drawing members from technology, politics, academia, finance and government. The organisation is known to the public but little is understood about its operations, according to Forbes. Leaked records show 222 people from around the world signed up for a retreat featuring discussion on cult-building, sex and preparing for World War III, Wired reported last week.'* A groundbreaking federal lawsuit has been filed against Palantir Technologies, its founder Peter Thiel, and CEO Alex Karp, alleging the company has crossed a constitutional Rubicon. The complaint accuses Palantir of deploying its powerful AI surveillance tools, normally used by the Pentagon, against the American public to monitor citizens, harvest biometric data, and censor speech. Plaintiffs claim the company is developing "synthetic intelligence" to predict human behaviour, a pre-crime system that violates "cognitive liberty" by trespassing into the human mind: [This Is an Extinction-Level Event & Palantir Just Got Exposed - CIA Whistleblower Sounds the Alarm | Entertainment | Before It's News](#) . Spain is the third European country in just over a month to ban its agencies from working with Palantir.

It is essential that the government maintains a high level of knowledge and skills in all major areas of IT and related disciplines so these specialists can monitor and ensure the government, councils and companies are not drawn into contracts and relationships that may have, or have the potential to, cause negative results.

Some information that is received and accepted in Australia is secretive and potentially intrusive; some monitors private or government information secretly. Non-compliant

information sources and equipment will be removed or prevented, in particular some information from satellites such Starlink and some websites.

- 20. Councils will pay retirement and welfare benefits:** Retirement and welfare will be assessed centrally each year and guidelines issued to councils that will provide and manage all benefits.

Benefits and welfare for individual groups that are in excess of what ordinary Australians received will be reviewed by an independent specialist whose reports will be available to the public. Fraud such as is common in the NDIS system will be investigated urgently and stopped; criminals will be charged and a very different efficient and effective system will be implemented by councils to deliver services to disabled people.

Unemployment and related benefits will be investigated, and new systems will be developed that incentivize people's ability and desire to perform satisfying work, including employment and as well as self-employed. This will involve searching for the most effective employment approaches anywhere in the world. The optimum solution is likely to be implemented by councils.

There will be a national superannuation fund that is voluntary, but with major incentives to join and remain contributing. Funds will be invested in Australia and subject to rigorous audits that include efficiency, effectiveness and the degree to which they support and align with Australia's Vision and Values.

- 21. All health and related services will be based on proven benefits:** This section is longer than the previous, not because it is more important, but because it illustrates several of the approaches the proposed government will apply.

The new government and governance will change the focus of health services and information from the current focus on curing ailments to improving health and preventing health problems as much as possible with allied incentives.

There are numerous health treatments that are not recognised by the allopathic profession, and therefore not advised or prescribed by allopathic doctors. There is a general rule based on widespread evidence that pharmaceutical companies will not provide medicines or medical approaches that are not profitable. Further, it is commonplace that the medical profession and associated bodies actively prevent such medicines and practices. Examples include cancer treatments that have proven successful over many decades, sometimes centuries, and treatments such as DMSO (Dimethyl Sulfoxide) that have ample proof of their effectiveness but are banned by medical bodies such as the US FDA. For obvious reasons, pharmaceutical companies will not pay for expensive major trials if they do not foresee, they will be able to make a profit from the medication in case it is proven successful and may replace another already profitable product. The medical industrial complex is very effective at both hijacking research and convincing the entire profession to ignore anything which threatens their bottom line.

The new government's Research Group will fully investigate a range of health cures that have significant proven success, and if appropriate, the government will sponsor suitable trials and publish the results. It is likely that the Research Group will recommend that proper double-blind tests as well as other successful testing procedures are carried out on medical and health treatments that have been shown to be successful but the pharmaceutical industry has not carried proper testing – often for the reason that they

cannot make a profit from the substance or treatment. Three examples are Ivermectin, DMSO (dimethyl sulfoxide) and Castor Oil. The new government may need to pay and contract out testing within strict guidelines, ensuring the full results are publicized.

Health insurance will not be subsidised in any way, including overseas medical organisations such as BUPA.

All medical services and products, both local and overseas, will be required to provide complete and accurate evidence of their contents such as mRNA, aluminium and Thimerosal, and their proven effectiveness, and for this information to be available clearly for all users. The COVID-19 so-called pandemic could not have happened if this requirement had existed in 2020. Failure to comply accurately and rapidly will be a criminal offence with severe penalties.

Currently, pharmaceutical and like companies are not legally liable for damage caused by their products. This protection will be removed so they are liable for harm or damage caused by use of their products.

All genetically modified (GMO) products and all research into GMO products will be reviewed with the expectation that many, possibly all, GMO products will be banned at least pro tem. This article explains the massive dangers involved [Government Assurances of Biotech Safety Are Worthless. Here is the Evidence. - Hatchard Report](#). Another article on Dr Hatchard's website notes, as it widely known, that credible research evidence demonstrates the limitations of the standard interpretations of genetic function. DNA has been regarded as the standalone source of life. All DNA-related findings will be reviewed and publicized. Significant changes to related practices and law are expected.

Research will be widely publicised explaining, for instance, how ultra processed foods (UPFs) and beverages are specifically designed to heighten chemical rewards in order to develop addictive eating behaviours among consumers that bypass the constraints of our normal appetites. Research will point to parallels with tobacco industry strategies to develop compulsive addiction, including dose optimisation of the so-called sugar rush and other hedonistic taste triggers.

All food regulations will be reviewed to ascertain their relevance and support including pasteurization of milk. It is likely that many current regulations will be changed and many removed such as the pasteurization of milk – this video explains the reason and results [The Real Reason America Pasteurized the Milk Supply — It Had Nothing to Do With Disease](#).

Medical reports must all be made public such as TGA DAEN that records 141,667 Covid vaxx injuries and 1050 deaths including many children. Medical authorities will be required to state that COVID-19 was only ever a normal influenza, and that they had either been fooled, bribed or were totally ignorant. Note: the TGA controls drugs in Australia, but is over 90% funded by Big Pharma, the industry that it oversees. This video explains the realities of the massive Covid murderous regime and various government department's involvement: [Witness Statement - Full Documentary](#) including the whistleblower being told 'you better shut up or your family may end up dead'. This explains that the Covid-19 so-called pandemic was in reality a 'plandemic': In January 2016, then-NIH Director Francis Collins emailed US official Anthony Fauci ahead of the meeting, flagging one session as a "potential land mine". The session, "Vaccine Innovation for Pandemic Preparedness", brought together GSK, Merck, Johnson & Johnson, the Gates Foundation and the Wellcome Trust. Pharmaceutical executives were clear: they would

only commit to rapid vaccine development for every future outbreak if governments resolved who would pay and how liability would be handled. Fortunately, a very brave man in Queensland, Australia, is challenging the false government views and actions in a court case that the government and authorities have done their best to prevent – and failed. The last of 6 efforts to dismiss the case was defeated and the case will go ahead soon. It is described in this video: [The Secret Case That Could End Jab Mandates Worldwide](#).

The latest extremely dangerous drive to reduce the world's population focuses on birds. The current drive to inject wild birds with a vaccine to prevent the spread of this mythical bird flu is another planned nail in the world's coffin, as explained in this video: https://www.youtube.com/watch?v=fldoMzl_jfE . It is alarming the ex PM Julia Gillard is was and is involved.

Virtually every major war begins under false pretences. German economist Richard Werner explains what the current global conflict is actually about. Failure to comply will result in major fines, bans and prosecutions. The latter will certainly apply to many areas relating to the COVID-19 fiasco. The US states of Tennessee, Arizona and Minnesota have criminalised Covid mRNA vaccines as a “bioweapon”.

Medical monopolies such as pharmaceuticals will be stopped, controlled or overseen. Many aspects of the failures of allopathic medicine are explained in depth on this website: www.drsembailey.com including [\(4\) 10 Truths About Health We Were Never Taught](#) .

The use of poisonous chemicals and sprays such as glyphosate and chemtrails will be reviewed as a priority; any negative results will result in cessation or control, and possible criminal charges. Many agricultural chemicals such as Bovaer will be banned. The Research Group will investigate the potential for natural bacteria to get rid of glyphosate in the soil and elsewhere, as described in this video: [\(33\) The Ancient Bacterium That Eats Roundup](#).

A health monitoring department will oversee and advise (not regulate) on all aspects of health, including food, drink, agriculture and exercise. Future health will be based on the overarching advice: you are responsible for your own health, but you must inform yourself of sound evidence-based information. For instance, the health issues caused by processed food and excess sugar will be highlighted.

The Research Group will assess the health effects of actions and vaccines during and after the COVID-19 period. The full findings will be released with a view to applying any lessons learnt as well as any criminal actions and changes in medical practices needed.

The Research Group will describe the history of health, failures in health, viruses, germ theory, supplements, exercise, unconventional successful cures for diseases, alternative medicine and allopathic medicine, including, for instance, how the Rockefellers took over and changed the US and much of Western medicine and related disciplines from about 1900, as described in this video [In 1909 the Rockefellers Bought Every Pharmacy Chain in America — Then Replaced the Shelves](#). All herbal remedies had been removed by 1925 thus depriving people of remedies that had been used and proven for many centuries. This information will be widely disseminated to assist people learn how to improve their health, and how much they have been misinformed. Broadening the research, the group will investigate how the Rockefeller's built a massive empire under Standard Oil in two decades starting almost nothing, in parallel with the Carnegies, Van de Bilt's and JP Morgan banking empire, as described in this video: [The Rockefellers Had No Recorded](#)

Another area of health that will be addressed by the new government is the regular use and promotion of foods that cause considerable harm to the body; the list is endless. **All foods and medicines, including natural medicines used in days past, will be assessed in terms of the benefits to the body as well as the economics, and the results widely publicized.**

One example is Tansi: [\(86\) More Powerful Than Ivermectin, Grew in Every Garden — Traditional Remedy That Few People Talk About - YouTube](#). Modern wheat and other grain crops were replaced by genetic engineering and other selection methods so they were easier to harvest, grow and process. In the distant past, bread contained ample goodness for people to live on with little else ('give us this day our daily bread'), but modern bread made from finely-milled grains is better described as a chemical product that has been refined so people enjoy it without realising how much harm it is doing to their bodies.

The new government will require every food product to have full disclosure of ingredients in prominent view on the packaging. As well, the packaging will show the major ownership and location of the manufacturer. Inspection for compliance with important regulations will be enforced such as the proportion of milk products in cheese and stocking rates of chickens in egg producing farms and related advertising.

Given the wide range of health issues noted above, and more issues that are not covered in this report, the government will encourage and support a new form of health practitioner who is aware of the full range of health issues in addition to allopathic medicine and provides advice and services that have been shown to improve health. This does not imply these new practitioners will be expert in all health areas – that would not be possible. But they will be aware of all significant health areas and willing to seek additional specialist advice when appropriate.

22. Environment management will be based on proven benefits to Australians: Water and agriculture management involves numerous complex issues including environment, infrastructure, risk hazard (floods, dams, tsunamis), health, natural resources including rivers, lakes and the Murray Darling Basin.

There is very dangerous and growing pollution of the environment worldwide in numerous ways such as rubbish disposal, micro plastics, geoengineering, chemtrails and toxins.

There are also many opportunities bogged down in red or green tape such as Bradfield Irrigation System; four hydro stations and a food bowl the size of Tasmania. Member for Murray, Helen Dalton. QUEENSLAND MP Robbie Katter and NSW MP Helen Dalton have explained why Australia needs to take a national approach to water management and implement something like the old Bradfield Scheme. As Mrs Dalton said *'It's a bitter pill for irrigators to be paying big money for irrigation allocations and then to see the federal government forking out millions for water that is simply left to run out to sea. That's the power of environmentalist ideology.'*

All environment and related laws, regulations, incentives and practices will be reviewed and, if necessary, stopped immediately, modified or expedited to meet new governance approaches. Much of what the farming and agriculture industries are driven by ideology

and financial industry methods. Some would call it gambolling. Much is directly against the interests of farmers and consumers. This video about car, farming, beer and highly popular personality Jeremy Clarkson in the UK explains the basic problems: [Jeremy Clarkson BLOWS UP the Entire Farming Industry With the Latest Announcement.](#)

Chemtrails in the sky will be stopped immediately and perpetrators charged, including government contractors: [The Mother of All Truth Bombs: RFK Jr. Blows the Lid Off Atmospheric Warfare.](#)

There is also considerable evidence of geoengineering such as in this video: [Chemical Ice Blizzard, 90 Second Alert](#), both for legitimate purposes and harmful purposes, often referred to as weather warfare. Both will be carefully researched and assessed to identify who is carrying out such geoengineering, what is the purpose and who authorized and paid for it. The research will include a wide range of evidence including the horror story described in this video: https://youtu.be/efUoQmG2g_0 . There is no doubt that geoengineering has and is causing very serious economic, health and environmental harm, as described in many articles and videos such as this: [Geoengineering Watch Global Alert News, June 13, 2026, # 566 \(Dane Wigington \)](#) . People and organisations responsible for such harm will be charged and tried in courts. Another video from the same source spells out an even worse current scenario: [Geoengineering Watch Global Alert News, June 27, 2026, # 568 \(Dane Wigington \)](#). This is the latest geoengineering event in the US: [Engineering Scorching Heat.](#)

However, excellent news is that one ancient microbe is dismantling plastics, pesticides, herbicides, and industrial toxins — from inside the same body they're poisoning: [\(33\) The Bacterium That Eats the Industrial Age's Plastics, Pesticides and Poisons](#) .

Weather warfare has been applied for decades, including by the US HAARP (the largest such facility in the world, there are about 100 in total) ionosphere heaters using many techniques such as chemical nucleation using many patented processes, as explained on www.geoengineeringwatch.com and recent revelations that the US has been manipulating Iran's weather for decades. Now Iran has destroyed the US HAARP equipment, Iran is not receiving large amounts of rain - [MASSIVE RAINFALL After Iran Destroys U.S. Weather Modification Radar!](#). Another video describing HAARP shows some of the appalling actions and results: <https://cdn.realaussienews.com.au/2026/08/HAARP.mp4>. The Research Group will investigate the extent to which geoengineering is happening in Australia.

The scaremongering about global warming that morphed into Climate Change with no credible evidence of the supposed growing dangers, was driven by the UN IPCC. Proponents included Bill Gates, but now he, or his avatar, say, correctly, there is little danger. But the Australian Government still promotes the supposed dangers and subsidise solar panels and wind farms that are far more costly, inefficient and provide low-quality electricity unsuitable for the national grid. UNESCO has been threatening the Queensland's Great Barrier Reef with sanctions for many years based on lies and misinformation that the reef is dying because of man-made pollution. In fact the reef has looked after itself well for some 8,000 years and is thriving, as described in this video and article by genuine expert Dr Peter Ridd: [Huge cost of UNESCO's protracted campaign against Great Barrier Reef - petersenior42@gmail.com - Gmail](mailto:petersenior42@gmail.com) .

There are, however, many potentially viable projects that have been discarded for decades such as flooding Lake Eyre via a 500 km canal from the North, as noted above.

These and many other proposals will be analysed and with updated cost-benefit assessments produced for consideration by the new government, relevant councils and relevant corporations. Other factors such as described in the energy section will be taken into account.

Another area that will be investigated is the production of fruits and vegetables that are either banned or rejected by various controlling authorities, corporations or agricultural industries, such as chufa, bread fruit and purslane; both would be ideal for many areas in Australis, in particular dry areas, where there would be many benefits. Alternative farming practices such as regenerative farming and their well-documented benefits will be reviewed and the results widely publicized.

Other losses to most of the world due to false economics, impact on corporate profits and improvements to agriculture will be investigated including Comfrey (*Symphytum*, Bocking 14 - [This Plant Replaces All Fertilizer FOREVER. Why Did the FDA Ban It?](#)), Skirret, Tepary Bean, Amaranth grain, Mesquite Trees, Sorbus trees, Oca, Sea Kale, Cattail, Buckwheat, the 'Candy' potato, Wolffia globosa (Duckweed - [\(20\) This Plant Has More Protein Than Beef, Doubles Every 48 Hours \(But It's Called Pond Scum\) - YouTube](#)), Bambara Groundnuts, Moringa Oleifera tree ([The Tree That Makes Multivitamins Obsolete \(But We Won't Plant It\)](#)). The current ban on Moranga in Australia will be lifted, replaced by encouraging its growth as a well-known 'super food'. Plant growth using galvanic action from metallic plates in the ground such as copper and zinc will be encourage. See [20 Forgotten Vegetables That Grow Like Weeds - The Lazy Gardener's Goldmine | Nostalgia Veggies](#).

Other agricultural approaches such as Justin Christofleau's electroculture will be reviewed for potential application in Australia, including current research in China (this review should be coordinated with research into free zero-point energy) and terra preta / biochar (addition of charcoal to replace the need for NPK fertilizers). Yet another change in cropping and soil management is described in this video, which is very timely given the shortages in fertilizer and related products as a result of Israel and the US attacking Iran - [One Farmer Ignored Every Agronomist in Australia — What Grew Back Doubled His Sheep](#).

However, the ongoing debate between organic and sustainable, and economic farming, will be essential to air, and to recognise that they are often incompatible, as discussed in this video between British King Charles and TV Presenter Jeremy Clarkson - [The King vs The Farmer: Clarkson And Charles' Battle Over British Agriculture](#) . Clarkson is correct, the difficulty is how to change from the current system to a system that is far better for both the land and food consumers. This will require very careful management in conjunction with many of the other points in this proposal.

Much of Australia, as well as much of the rest of the world, has been transformed from native vegetation and forest to agricultural land, cutting down forests and forcing extra growth by fertilizer, to the detriment of both the land and environment. This video demonstrates how one person led a change back to natural forestation: [How One Sydney Banker Spent 36 Years Bringing Back Australia's Lost Rainforest](#). The new government and councils will assess options for to return land to natural environment, explain how this can be done and encourage suitable projects.

Another approach to farming and agriculture that will be assessed and, if appropriate, promoted by councils will be the Amish farming method applied in parts of the US,

although there are similar approaches still applied in many countries over the world: <https://youtu.be/jri347BF8IM>. This assessment will review and publish alternatives to the use of chemicals rather than natural methods used in various agricultural such as described in the wise and natural advice in this video <https://youtu.be/o0nAf5-irqM>. This self-sufficient approach, potentially with some modern improvements, has many advantages to all levels of life – except banking and parts of the agricultural industry. Another example of legislative overreach is the 2011 US Food Safety Modernisation Act that noted closed cell sprouting that accelerated seed growth by several hundred percent is ‘a supreme biological hazard’. Such is the power of the agricultural cartel: <https://youtu.be/Wa8OEMREP0c>, and another opportunity to improve food production. Yet another approach, Regenerative and Organic agriculture based on the science of Agroecology, will be reviewed to ascertain the potential benefit to Australia’s agriculture using nature-based farming systems, distinguishing them from degenerative industrial agriculture. And finally, another crop that was grown around the world that survived with little water and needed no fertilizer is Lamb’s Quarter that has exceptional nutritional benefits (closely related to Dandelion) - [Indigenous Tribes Called This Plant “The Life Giver”- Scientists Call It a Weed](#). Again, this crop was branded a weed by the agricultural industries because it did not require their fertilizer and poisonous products. Another ‘superfood’ that is barely known is the easy-to-grow but difficult to harvest Honeyberry [Better Than Blueberries And Oranges Combined. Grows For 50 Years. Why Don't You Know About It?](#).

The current problems with oil and fertilizer shortfalls that are likely to worsen indicate an urgent need to replace, at least in part, the use of fertilizer on farms. It is questionable whether the growth in fertilizer since WWII was the most cost-effective way to improving crop yields and for the long-term good of the soil itself. Certainly, the massive growth in fertilizer has resulted in very large profits for the whole fertilizer industry. With current prices and shortfalls, there is an urgent need to investigate alternatives such as described in this video: [Make Your Own Nitrogen Fertiliser On Farm](#). Also, this video explains a similar process to produce ‘green nitrogen’ explaining the technology in more detail: [Lightning, Fertiliser, and the Future of Green Nitrogen w/ Prof. PJ Cullen - Shirtloads of Science](#). Another process and equipment already undergoing ‘live’ tests on farms in Canada is FuelPositive, a Canadian clean-tech company producing on-farm Green Ammonia production systems, <http://www.fuelpositive.com>.

Another crop that the Research Group will investigate is hemp. Hemp can be used for many purposes including bio-fuel where it has been shown to have a cost input to output ratio of 1:6.8 when grown on very low-grade land with no fertilizer. Hemp, a plant grown for over 10,000 years, has many uses but has been banned or sidelined for the usual political reasons as well as prevention of competition to large industries such as fuel, hempcrete and textiles. This video explains: [This Plant Can Fuel Any Engine For Free. Why Did Rockefeller Criminalize It In 1937?](#) and [Inside the World’s Largest Hemp Processing Line – How Fiber & Hempcrete Are Made](#). After the results have been publicized, it is expected that more existing and new industrial low THC hemp growing and essential processing plants in Australia will be strongly encouraged together with the existing Agrifutures group and the Australian Hemp Council.

- 23. A research group will assess dubious information and publish the results:** This Research Group will be set up as soon as possible with specialists highly skilled in all

forms of research, including AI, to assess important issues. There is so much information, misinformation and deliberately withheld information that a form of triage will be necessary to prioritize research that will enable voters to replace false information and a lifetime of indoctrination, so they make voting decisions based on factual information, ***a critical priority for democracy to work properly.*** It is likely to be decided to delay some information for a period because immediate release would be too disruptive. Bear in mind that no industry, organization or cause tasked with solving a problem will actually solve it because the problem disappearing threatens their economic livelihood or political power.

Many of the group's findings will seem unbelievable to most people who suffer from a lifetime of indoctrination, often from people, teachers and media that believe in what they say or write. It will be vital that the group's findings are released in a gradual manner to avoid both information overload and people retreating into their cognitive dissonance. Breaking free from a system that deliberately creates fear removes a major form of mind control. Cognitive Dissonance has been described as when people hold a belief that is very strong, and when they are presented with evidence that works against that belief, the new evidence cannot be accepted by their mind. It would create a feeling that is extremely uncomfortable called cognitive dissonance. And because it is so important to protect the core belief, they will rationalise, ignore or even deny anything that doesn't fit in with the core belief.

So much has been hidden from the general public as well as the middle-level controllers of countries that full disclosure will be horrendous and dramatic to most people. This will inevitably have to happen slowly. And who controls this disclosure is likely only known at the highest levels in the world. The Philadelphia Experiment will frighten most people, as will the facts underpinning the UFO File, the Breakaway Civilization and aliens. One of the best descriptions can be seen at this video: [!\[\]\(9b800325684b184be8e88ceef387e61b_img.jpg\) "DISCLOSURE DAY" WAS A CIA PRODUCTION! 👁️](#).

It is doubtful whether more than a handful of Australian parliament and Senate members are aware of the truthful and accurate descriptions of event from history and current events, having been subjected to a lifetime of very careful indoctrination that is reminiscent of Aldous Huxley's 1984 Ministry of Truth. Another source of information that the Research Group will draw from is NuggestsNews. This video provides a wide range of issues, including many of the horrors and false information in and about Australia: [\(1248\) Nugget's News 9th Birthday Livestream - YouTube](#).

The amount of appalling, often considered Satanic, crime in most countries in the world is horrendous, and is formally denied by almost all authorities. The great majority of people at all levels are unaware and will think such views are 'conspiracy theories'. However, for those who choose to find and examine the evidence, most of the horror stories are his valiant attempts to expose them: [Ex British MP Andrew Bridgen on Satanism, Child Trafficking, Corruption and Abuse \(Dutch subs.\)](#). Also [Westminster BOMBSHELL - Shocking New Scandal Exposed: Andrew Bridgen and \(1777\) Andrew Bridgen: Don't Be A Coincidence Theorist - YouTube](#). A new government, party or politicians planning for a new government would be very wise to seek advice from Andrew – one of the finest politicians in the world. Everyone should view these videos,

everyone.....they are frightening. Then ‘everyone’ should ask the question, how much of this is happening in Australia? Does Australia have an Andrew Bridgen or a Rupert Lowe ([Is the Government Organised CRIME? | Rupert Lowe](#)) and this essential viewing video (although he does not mention the overriding Zionist/bankster control) [Rupert Lowe Warns of the Globalist Agenda Destroying the West and the Revolution Soon to Come?](#) Those planning to restructure the Australian government and governance should learn from Rupert Lowe’s brilliant strategy: [Rupert Lowe's 4D CHESS Move Leaves Labour in SHOCK!!!](#) .

Section 13 noted all 'woke' issues will cease such as gender issues; men and women will be defined by biology and birth. In particular, all woke, ideological, gender and like topics currently taught to children in many schools will be forbidden. For instance, this video describes a range of material being pushed in primary schools, high schools and daycares sexualizing our children as the globalists push to normalize paedophilia and the trans agenda: [Paedophilia, Trans Agenda & "Safe Secrets" In Aussie Schools - Craig Cole](#) . However, there are far more dangerous and covert aspects to ‘woke’, as explained in this video by Paul Weston for the new Restore Party in Britain, [Is This Britain’s Last Hope? Paul Weston Explains Joining Restore Britain](#). Highly subversive people have been infiltrating numerous institutions for decades in the UK through alienated group such as Antifa with the aim of breaking down and debauching society. The Research Group will investigate the extent that this in Australia and disseminate their findings.

It is vital to recognise that much factual information shown to be supported by credible evidence will not only shock many people but be viewed as very dangerous to certain elites in Australia and overseas. Therefore, it can be expected that forces will be applied to prevent such information being released to the general public and precautions will need to be taken avoid malfeasance. This point was noted too regarding research into alternative power methods.

The revelation that is likely to shock most people is that the Earth is flat, not a globe and not rotating and has a covering described in the Bible as the Firmament. This point is admitted in this video describing numerous US government documents: [04 – 44 Govt docs admit flat motionless Earth – Realaussienews](#).

One highly contentious area that the Research group may assess at some stage is the evidence that no contemporaneous evidence supports most of what is written in the Christian Bible or the main Muslim texts such as the Quran https://youtu.be/wy_iD6Lf6MY . Most recognised texts were written a few to many centuries after the supposed events. An exception is The Bible New Testament where four books. Matthew, Mark, Luke and John, were written between 15 and 30 years after the death of Jesus, so were based on personal memories and interpretations. There is no credible evidence that supports the existence of Mohammed, let alone his marrying a nine-year-old girl or being in Mecca. The Dead Sea scrolls present an entirely different story to that in the Bible and believed [\(228\) The Dead Sea Scrolls Prove The Bible Is A Lie! - YouTube](#) . Other videos provide more evidence that question the basics of Islam: [You Will Be Shocked to Learn Mohammad's Real Identity! | We Now Know Who Mohammad Was..., Is This The Person Who Invented Muhammad As A Prophet Of Islam? And This Is Why We Believe The Origin Of Islam Is From Satan!](#) Parts of the Koran have

now been correctly interpreted and actually refer to Jesus <https://youtu.be/1WQJWgtQSn4> . These videos also examines the oldest Qur'anic manuscripts, inscriptions, and language to reveal a radically different origin story: [The Qur'an was not written by Muslims — the earliest manuscripts prove it. #neilhamson #islam](#). The origins of Islam theology can be traced to around 200 AD, some 4 centuries before Mohammad supposedly lived. **It may be decided that this information should not be broadcast because it would be far too disruptive.**

Everyone needs to fully understand the potential for AI to affect everyone's lives, as explained in the first 20 minutes of this video: [Mike Adams: Dire Warning 11/10/25 - Something Strange is Happening.. Never Seen Before! \(Video\) | Alternative | Before It's News](#) . This will include the accuracy of published news and official views such as of wars, banking, medications, allopathic medicine, politics, science and information technology. This group will be aware that AI filter algorithms and built-in bias+ can exclude information that is not consistent with the views of the AI owners such as Google.

The group will be equally aware of how biased, selective and controlled most 'news' in Western mainstream media is. In the USA, 6 corporations own almost all US media; in Australia the tight control of media is even worse; so-called 'freedom of the press' currently is a farce. Even the government-owned ABC (Australian Broadcasting Corporation) is little more than a left-leaning dispenser of government propaganda and other false information. The new government will sell the ABC Corporation and contract out some services that are widely valued and not available from other sources such as farming information such as climate change, subsidized by the government at over \$1bn each year.

The group will assess information from Dr Steve Greer over some 30 years, including his views expressed in this video, in particular, the relevance to Australia: [The Dr. Steven Greer Podcast Episode 16 - "How to Avoid Winning the Battle and Losing the War"](#). Full disclosure of a wide range of world-altering information is likely to be released shortly, as described in this video: [EXCLUSIVE: Dr. Steven Greer Breaks The Biggest News In His 35 Year History Of Leading The Disclosure Movement Just Days Before Trump Is Set To Release The Secret UFO / Extraterrestrial Files!](#). The researchers' results will be published and widely disseminated, including their reference sources.

The Research Group will investigate and publish their findings about the deliberate manipulation and systematic erasure of history and details of a past civilisation in much of the world that was replaced during the 1800s by centralised banking and related control and industrial capitalism, as described in this video [\(184\) The Secret Society That Erased Tartaria From History - YouTube](#) (NB ignore the AI-generated pictures). The group will investigate and report on the evidence of old buildings such as in Melbourne, Sydney and Brisbane that could not have been built using known building methods of the time, Similar to numerous old buildings around the world, as reported in many articles and videos about Tartaria such as this video: [CIA TARTARIA FILES EXPOSED... We've Been Lied To For Generations](#). This research will parallel the investigation into alternative power sources proposed in Section 18 Electricity.

Everyone will be invited to challenge the researcher's findings that will be widely publicized. The research group's responses to all challenges will be disseminated and published. The group will be available to research any issue, although a triage process may be necessary. The group will only have powers to enforce access to information if

necessary; but the group is expected to make recommendations for action to other government departments, so to some extent act like an ombudsman. This group should be set up as soon as possible to provide information about both the issues above and other aspects of the proposed government structure and governance, including developing details of the proposed structure. It is expected that the misinformation published in most mainstream media will be challenged and revealed for what it is, as well as the sources. It is expected that the MSM will return to their past status of the trustworthy and valued Fourth Estate.

Another key question that the Research Group will investigate is the compelling evidence, not accepted by officials, that the Whitlam government changed Australia to a registered corporation in 1973, but without the referendum required by the Australian Constitution. For instance: *Year 1972 – “Be it enacted by the Queen’s Most Excellent Majesty, the Senate and the House of Representatives of the Commonwealth of Australia ..” = Crown and Constitutional Authority. Year 1973 – “BE IT THEREFORE enacted by the Queen, (Note: Most Excellent Majesty and Commonwealth removed) the Senate and the House of Representatives of Australia” Most Excellent Majesty, Royal Assent has been removed.* Also, the video [How Australia’s Constitution Was Altered Without Your Consent - \(1973 Explained\)](#) explains how the change to the Constitution made by the Whitlam government in 1973 was not approved by a referendum, as required in the Constitution invalidates all subsequent laws, oaths etc. Like the Wood Royal Commission report that was not released because it was considered that it would result in loss of confidence in the government, the Australian legal profession is aware that this 1973 change would negate government actions for the last half century.

Subsequent changes, also without the required referenda, extended the corporate status. As noted in the issues section, the evidence in numerous documents will be a first-priority issue to assess the implications, including the information in this article and video: [The role of the United States in the dismissal of the Whitlam Government](#), and <https://youtu.be/x-KxNiNXIPc> and a summary of related views: <https://cdn.realaussienews.com.au/2026/02/Interesting-commentary.mp4>. It is important to recognise that Whitlam’s plan was to remove Australia from the control of the British Empire and re-take control of Australian resources. This plan did not suit either the British or the US, leading to the subterfuge of Whitlam’s removal. Recognition of the changes to Australia’s Constitution without referenda would potentially involve massive changes and ground-up rebuilding in many areas of the government, including all laws, the legal system and all government employees. However, it seems Whitlam, to some degree, had the best interests of Australia in mind: Removing Australia from the clutches of the British Empire. Ex PM Kevin Rudd, who denigrated President Trump, is an advisor to British powerhouse, Chatham House. President Trump has signed a deal with Prime Minister Albanese for Australia to both mine and process rare earths, depriving UK mining giant Rio Tinto, whose largest non-institutional shareholder is the Royal Family, of this critical deal. This is part of a broader strategy to challenge globalism and British influence, juxtaposing Trump’s economic policies with historical British tactics of economic control and usurping the historical British imperial dominance. No doubt China will make further counter offers and advance the return of manufacturing in Australia, particularly when power prices are very low (see 15. Electricity). Much more related change can be expected soon.

Finally, another key issue the Research Group will assess is undue influence on government, councils, organisations and people by certain individuals and organisations, individuals both local, national and international. This is common practise throughout the world where one organisation, foreign government or powerful individual wants to change some aspect of a government in a way that favours themselves.

One example is the US government that regularly does this, often through CIA covert activities and groups set up, taken over or otherwise forced to propagate CIA covert plans and views. The group's first focus will be on the primary mechanism of global control by the World Economic Forum, including the Committee of 300 (<https://youtu.be/nvPFzFddIzE>, supposedly an advisory committee to the British monarchy), in particular the control of Australia. This is best summarized by this 110-minute video, [\(48\) The Great Awakening Documentary Just Released. Premier June 3, 2023 - YouTube](#), that explains the WEF's plans to take full control of the world, including Australia, and in Dr John Coleman's book *The Conspirators Hierarchy, The Mechanism of Global Control*. There may be other groups controlling Australia, at least in part, as the UK government has been controlled for over a century by members of the Fabian society – most British Prime Ministers have been, as is the current UK PM Keir Starmer, were members of the Fabian society with its genocidal and highly elitist policies. This global control may be failing as greater powers take over, although the new Prime Minister of Britain is a Fabianite, as explained in this video: [The Fabians Waited 140 Years For This Man](#).

The group will focus in particular on Zionists, Jesuits and the Jewish Council. Numerous articles and videos explain their influence over centuries, even millennia, and in most countries in the world. This article provides a comprehensive summary, including Jewish influence in Australia [The China - Jesuit partnership. Who owns China? - cairnsnews.org](#). The next video covers ex-Foreign Minister and past NSW Premier Bob Carr's involvement: [Exposing the DISTURBING ISRAELI Lobby inside Australia | Ex-Foreign Minister Bob Carr](#). Another video discusses the role of the Jewish Rothschilds: <https://theexposenews.com/2026/02/21/who-is-the-head-of-the-rothschilds-and-are-they-jewish-2/>), and another [Zionist Jews Mark Leibler and Jeremy Leibler have Palestinian-Australian Dr Randa Abdel-Fattah sacked from Adelaide Writers' Week - petersenior42@gmail.com - Gmail](#), and include local and overseas NGOs including the UN, WHO, IMF ([A Secret Organization That Controls 190 Countries](#).) The Executive Council of Australian Jewry represents one of the wealthiest groups in the nation, with "old Jewish wealth" like the Lindsay Fox, Anthony Pratt, Harry Triguboff, Solomon Lew and Frank Lowy in addition to the younger nouveau riche set whose names are far less familiar. Yet another video explains how Jewish leaders influence the medical profession: [The Israel Lobby's War on Aussie Doctors | EP07 - petersenior42@gmail.com - Gmail](#).

The group will address and answer the question: given that about 2% of the Australian population are Jews (about 120,000), do Jewish people have significantly more than 2% of influence over the Australian government, states and territories, councils and influential organisations? Another important guideline about Zionists and Jews/Judaism is explained in this video: [Zionism's Biggest MISTAKE In 300 Years. End Of Project. | Profs. J. Sachs & Y. Rabkin](#), and another video about the double standards applied to some Jews (as well as warfare) [Israel Is Running Australia and No One Is Talking About It](#). Yet another video explains how Jewish people have been expelled from numerous countries and the reasons

for over 2 millennia: [WHY have \[REDACTED\] been EXPELLED 109 Times?](#). The control of the government by Jews and Jewish organisation has been overpowering in the UK for more than a century, as described in this video: [Max Blumenthal EXPOSES False Flag “Antisemitic” Stabbing in U.K.](#) However, if people blame the Jews only, the Roman Jesuits could manipulate humanity into obsolescence using AI and robots to do it.

This Tucker Carlson interview in the US is an example of how the Jewish influence works in the US: [Israel Spent \\$10,000,000 to Get Rid of Him....](#) Another explanation of Jewish control in Australia is explained by ex-Foreign Minister Bob Carr: [Exposing the DISTURBING ISRAELI Lobby inside Australia | Ex-Foreign Minister Bob Carr](#). Another aspect that the group will investigate is the growing amount of evidence that the Holocaust was made up for political and control purposes and did not happen as described and is officially accepted, as explained in many articles and videos on these websites: [2026 Holocaust Summit | Holocaust Summit](#) and [Holocaust Education Is Crucial... and we are teaching students who are brave and humble enough to learn. - Holocaust Academy](#) and [cdn.realaussienews.com.au/2026/06/Anne-frank.mp4](#).

Two more issues the researchers will assess is charities with tax-free status sending funds to Israel, potentially funding war crimes, including the Executive Council of Australian Jewry (ECAJ), and the Zionist Federation of Australia (see this video: [Australian charities bankrolling Israeli war crimes? | The West Report](#)). Also, the recently announced Royal Commission into the Bondi shooting is clearly being influence by the Australian Jewish lobby, as explained in this video: [!!!*The *West *Report - petersenior42@gmail.com - Gmail](#).

Other religious groups and people are gradually and surreptitiously trying to take control of Australia. Whilst the Jews are the most overt as well as covert, Muslims are encroaching by taking over select areas such as Sydney suburbs, building mosques and overtly have prayer meetings on public roads. Such take-overs are overt in other western countries, in particular Britain many city mayors such as London are Muslims, in part due to immigration and high birthrates. The research group will assess and publicize these forms of growing control. However, the group calling themselves Ex-Muslims is growing fast, particularly from youth who get much of their information from their mobile phones and not the official Muslim literature. The Muslim birthrates are slowing in many countries. Parts of Japan are rejecting standard Muslim practises such as the 5 daily loud calls to prayer. The Netherlands are calling for Muslims to leave the country.

Several Australian people were selected and trained in the Young Leaders programme organised by Klaus Schwab, past leader of the World Economic Forum. This program included plans to implement Schwab and the WEF agenda, that include Marxist approaches and other aspects to are opposite to the new government's vision. For instance, Jacinda Ardern, the previous New Zealand Prime Minister was an early participant in Schwab's training, leading to her ruinous leadership of NZ following her chairing a young Communist group. These Australians are will be identified and are most unlikely to be suited to any government or council position.

Another focus will be a review of Blackrock and its CEO Larry Fink, including Blackrock's ESG directives, control and media control. Undue influence, including from overt and covert lobbyists, identified will be publicised and, unless they are influencing openly for the good of Australians, will be prevented, potentially with appropriate criminal charges and full exposure.

All politicians and council board members will be required to provide up-to-date summaries of their assets, and any significant ‘free’ assets and contributions received such as holidays, including all contributions from donors over a limit to be fixed. The latter is to prevent direct or indirect bribery to influence the politician. Politicians and council board members must be citizens and not have dual citizenship. A review of secret contracts with revolving doors by politicians will ensure current and former politicians do not seek or accept employment in any business or organisation that has interactions with government departments they have overseen or worked with.

Conclusion

The conclusion to this proposal repeats the text at the end of the introduction: Most people will find the unvarnished truth and many points, information and proposals in this report very uncomfortable and very difficult to comprehend, particularly if they suffer from cognitive dissonance. But democracy doesn’t work if voters are misinformed and fails to protect the rights of minorities, as Socrates found out, in which case a republic may be superior form of government. Karl Marx and Saul Alinsky realized that the way to take control of a society is to destabilize it with false information: “*You destabilize it by destroying Judeo-Christian values, and you destabilize it by creating civil unrest and revolution.*” Recall Ghandi’s quote “***First they ignore you, then they laugh at you, then they fight you... then you win.***”
